ABSTRACT

This annotated bibliography documenting the range of recent studies of manpower utilization is intended to stimulate qualified investigators to begin a systematic, technologically sound ordering of human manpower and skills in the health field. To correct the existing inefficient distribution of manpower in the health industry, more appropriate distribution of tasks among health workers is needed. The research resumes are arranged by accession number and include document titles, index terms, and abstracts. Indexes of subject terms and personal and organizational authors are supplied and details on how to order the National Technical Information Service documents are given. (Editor/SN)

INTRODUCTION

The health industry is moving into its "industrial revolution" at a time when its business and industrial counterpart is entering the "post-industrial era." Health care is plagued by inefficient utilization of the skills in its work force and by problems of geographic and specialty maldistribution of its workers. Nor will simplistic "more of the same" training solutions substantially alter this state of affairs. Clearly, the orderly application of a technology of training and utilization is required if we are to achieve national goals of access to adequate health care at a reasonable cost for all our citizens.

The general problems of utilization and maldistribution have been studied many times during the past decade. A conclusion of nearly all such studies is that more appropriate distribution of tasks among health workers is feasible and necessary.¹ And, in spite of a large number of so-called "task analysis" studies, there is little agreement regarding pertinent methods, variables, conventions or analytic techniques. Imagine the confusion if physical scientists were to use measurement devices of their own unique design and scale, precluding effective communication.

This annotated bibliography documents the range of recent studies of manpower utilization. Results of individual studies will be of interest to some readers; methods employed will be useful to others. But the greatest potential use of this document will be as a stimulus to qualified investigators to begin the process of specifying a set of definitions and conventions through which an orderly technology of manpower utilization will be developed.

HOW TO ORDER NTIS REPORTS

Documents listed in this bibliography can be purchased either in paper copy or microfiche from the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, Virginia 22151.

Prices for paper copy vary and are subject to change without notice. Generally, the paper copy price is based on page count. For instance: 1 to 300 pages, \$3.00; 301 to 600 pages, \$6.00; 601 to 900 pages, \$9.00. Microfiche is priced at 95¢ per document.

When ordering documents, determine the cost based on page count and enclose a check or money order for that amount payable to NTIS. NTIS will ship your document and return any overpayment, or bill you for the amount of an underpayment if you have a domestic address.

An NTIS deposit account provides the most convenient method of ordering documents--the request is quickly processed through our automated system and the correct amount is charged against your account. A minimum of \$25.00 is required to establish an NTIS deposit account.

Descriptors: (*Job analysis, Theory), (*Training,
Job analysis), Performance (Human), Probability,
Decision making, Specifications.

The problem was to devise an effective method of task analysis that would fit in with a larger program of training device development. Four major results were obtained: (1) A set of Guidelines for Task Analysis. These Guidelines include: (a) Background material thought to be useful to the task analyst (e.g. 'The Nature of Task Analysis' and 'The Nature of the Task Analyst') (b) An overview of the process of task analysis (c) Samples of forms to be used in task analysis (d) Instructions on what information to obtain, how to get it, and where and how to record it (e) Examples of completed portions of a task analysis (2) A system of interrelated definitions, constructs, and hypotheses relating task attributes to training requirements (3) Recommendations for further research to improve Task Analysis and Training Situation Analysis.

GUIDELINES FOR TASK ANALYSIS.

Technical rept.,
John D. Folley, Jr. 22 Jun 64, 40p
NAVTRADEVCEEN-1218-2
Contract N61339-1218
See also AD-445 869.

Descriptors: (*Job analysis, Theory), (*Training,
Job analysis), Decision making, Determination,
Time studies.

The guidelines are to help the TSA team in accomplishing the task analysis part of the Training Situation Analysis (TSA) specified in the basic instructions for TSA, and supplemented in the memorandum 'TSA Guidelines' dated 6 April 1962. The first section of the Guidelines presents some basic ideas that the analyst should understand before getting into the instructions for task analysis. The following sections present the stages of the task analysis method essentially in the order in which they would normally be performed. Examples are given to illustrate the type of data required, and discussions of special problems or techniques are included where they clarify the instructions. (Author)

A REVIEW OF THE LITERATURE OF TASK
ANALYSIS METHODS,
Andrew P. Chenzoff, 22 Jun 64, 31p
NAVTRADEVCEEN-1218-3
Contract N61339-1218

Descriptors: (*Job analysis, Theory), (*Training,
Job analysis), Reviews, Reliability, Specifications.
Identifiers: Task analysis.

This review revealed that, in studies of task analysis methods, very few workers have tried to determine which items of task information are actually relevant to training equipment decisions, still fewer workers have attempted to develop a method by which the relevant information can be assessed, analyzed, and combined in such a way that the best decisions about training devices might be made. Two basic approaches to task analysis for deriving training and training device recommendations are described. (Author)

PERSONNEL INVENTORY (A REPORT ON AN
AUTOMATED INDEX TO MANPOWER).

Technical memo.,
Robert A. Dickmann. Jan 65, 29p TG-647
Contract N0w-62-0604-c

Descriptors: (*Labor, Indexes), (*Personnel, Inventory), Automation, Data processing systems,
Personnel management, Job analysis.

The purpose and problems of an automated index to manpower are presented, and four criteria for the elimination of these problems are listed. An explanation of ALGONE, APL's personnel inventory program, is given outlining in some detail the application of ALGONE to the search, print, and edit functions of APL's Information Storage Package. Finally, ALGONE's present value and future potentialities are given. (Author)

GUIDELINES FOR TRAINING SITUATION
ANALYSIS (TSA).

Final rept.,
Andrew P. Chenzoff, and John D. Folley, Jr. Jul
65, 213p NAVTRADEVCEEN-1218-4
Contract N61339-1218

Descriptors: (*Training devices, *Handbooks),
Management planning, Naval training, Training,
Job analysis, Test methods, Performance (Human), Effectiveness, Decision making, Systems
engineering, Personnel management, Costs, Man-
machine systems.

These guidelines represent a textbook for instruction in three phases of Training Situation Analysis (TSA), a standardized procedure, developed by NTDC, for systematically gathering and interpreting the information which is relevant to the planning of training and training devices. Three phases of TSA are described in detail: System Familiarization, Task Analysis Method (TAM) and Training Analysis Procedure (TAP). System

Familiarization provides an orientation to the training problem, the system structure and flow, and the equipment. Task Analysis Method produces a set of task descriptions containing the information necessary for making training device decisions. Training Analysis Procedure produces a ranking of tasks based upon the potential benefit to system performance as a result of training and the cost of that training. Recommendations for the conduct of these three phases and suggested working forms are presented. (Author)

A HEURISTIC APPROACH TO ALTERNATE
ROUTING IN A JOB SHOP.
Bachelor's thesis and Master's thesis,
Francis John Russo. Jun 65, 52p MAC-TR-19
Contract Nonr-4102 (01)

Descriptors: (*Scheduling, *Job analysis),
Management engineering, Simulation, Digital
computers, Queuing theory.
Identifiers: Theses.

The research reported investigates the use of heuristics for selecting from several alternate routes, resulting from partially-ordered tasks in a job-shop order file. The experimental vehicle employed was digital simulation on the Project MAC Compatible Time-Sharing System. The methodology was to conduct two passes of simulated shop runs. The first, with two artificially high levels of alternate incidence, tested the efficiency of five different alternate routing heuristics in reducing mean tardiness. The second pass consisted of runs with the best heuristic developed during the first experimental phase, applied to a realistic length and frequency of alternate strings. The performance characteristics of the different heuristics are discussed at length. In addition, some implications are drawn of the computational nature of alternate routing and the difficulties encountered in implementing alternate routing heuristics at operation time. (Author)

JOB EVALUATION: A PRELIMINARY ANALYSIS
OF ITS APPLICATION TO NAVY EN-
LISTED BILLETS,
Alexander J. Rose, and Francis L. McTavish. Jan
66, 68p WRM-66-27

Descriptors: (*Job analysis, *Naval personnel),
Marine corps, Personnel management, Manpower
studies, Research program administration, Feasibility studies.

A discussion is presented of some of the problems that may be encountered in the course of developing a billet evaluation system for Navy enlisted billets. Included is an assessment of the Marine Corps billet evaluation system. Job evaluation in the modern Navy is a complex problem. Advancements in technology, as well as in strategic and tactical planning, have given rise to problems of such magnitude in personnel administration as to require management tools capable of coping with the vast number and diversity of skills employed in today's Navy.

(PSYCHOLOGY), LEADERSHIP, SOCIOMET-
RICS, SOCIAL PSYCHOLOGY, INTEL-

LIGENCE TESTS, INTERCOMMUNICATION SYSTEMS, TYPEWRITERS.

Twenty-eight groups were observed performing a task that requires teamwork but allows flexibility of organization. The teams were made to experience varied amounts of membership replacement. Team performance was found to suffer significantly: (a) if the number of members replaced was large relative to the past history of the team; (b) if succession in the control position was involved; and (c) if the successor's intelligence was lower than his predecessor's. Performance did not suffer if (a) the number of members replaced was large absolutely but not relatively or (b) replacement occurred as turnover in subordinate positions; further, (c) performance was unrelated to intelligence except following replacement. The findings are not task-specific, as they in general replicate those of previous studies employing different tasks. (Author)

Identifiers: SAGE.

The report describes exploratory developments on laboratory models of automated training subsystems for information systems. Such subsystems could provide future information systems with the capability to train their users on the job. The report outlines on-going studies concerned with (1) the unique training requirements in advanced information systems; (2) new training concepts and techniques to meet these requirements; and (3) an analytic tool to describe functional and structural overlap of equipment required for both operations and training. SUPERVISORY JOB DESIGN.

Louis E. Davis, Ernst S. Valfer and Kenneth Pool. May 64 2p Rept. no. 64 5 HFT 64 10T
Contract Nonr3656 04

Descriptors: (*JOB ANALYSIS, LEADERSHIP), (*SUPERVISION, INDUSTRIAL PRODUCTION), (*SUPERVISORY PERSONNEL, JOB ANALYSIS), ATTITUDES, GROUP DYNAMICS, MOTIVATION, PERCEPTION (PSYCHOLOGY), DECISION MAKING.

Two job-design treatments changing the duties, responsibilities, and authority of first-line supervisors and, by delegation, of workers were introduced in an industrial plant. In the first state, each supervisor was responsible for only a segment of all product completion tasks. In the second state, the supervisor was made responsible for all production functions but not product acceptance; authority for the latter was added in the third state. These job changes were designed to test the following primary hypothesis: Higher economic productivity (lower total cost) and greater need satisfaction for the members of a work group, including the supervisor, will result from specifying the job content of the supervisor in the direction of increasing his authority and responsibility by including supervision over all the functions required to complete the product or service assigned to his work group. A general response mechanism model proposed that causal variables sensitive to the organization will effect end-result variables with time slippage through mediating sequential changes in perceptions, attitudes, and motivations by the job holder towards job and organization, resulting in changes in behavior towards others and the task. FACTOR ANALYSES OF WORKER-ORIENTED JOB VARIABLES.
Rept. no. 4.
Joseph William Cunningham and Ernest J. McCormick. Jun 64 2p
Contract Nonr1100 19

Descriptors: (*JOB ANALYSIS, INDUSTRIAL PSYCHOLOGY), (*PERSONNEL, INDUSTRIAL PSYCHOLOGY), (*FACTOR ANALYSIS, MANPOWER STUDIES), PERSONNEL MANAGEMENT, STATISTICAL ANALYSIS, CORRELATION TECHNIQUES, BEHAVIOR, PERFORMANCE (HUMAN), CLASSIFICATION, PSYCHOMETRICS, LABOR.
Identifiers: WORKER ACTIVITY PROFILE.

The present report concerns a further investigation of the dimensions of worker-oriented job variables through use of the Worker Activity Profile (WAP). In this study, factor analyses similar to Gordon and McCormick's were conducted, using a job sample based on percentages of people within various occupational areas. The resulting factors were then compared with Gordon and McCormick's by use of the coefficient of congruence. The results of six separate factor analyses of WAP item groups were judged to be generally meaningful. Of the 32 factors obtained in this study, 16 were classified as comparable to factors from Gordon and McCormick's study, two others appeared from inspection to be similar to two of their factors, and eight factors showed a noticeable relationship with factors obtained by Gordon and McCormick. It was concluded that there are fairly stable and meaningful dimensions of jobs that characterize work in worker-oriented terms. These dimensions are sufficiently structures so that they emerge through factor analysis despite differences in the choice of bases for job samples used. (Author)

THE DEVELOPMENT, ANALYSIS, AND EXPERIMENTAL APPLICATION OF WORKER-ORIENTED JOB VARIABLES.

Rept. no. 8 (Final).
Ernest J. McCormick. Jul 64 2p
Contract Nonr1100 19

Descriptors: (*JOB ANALYSIS, INDUSTRIAL PSYCHOLOGY), (*FACTOR ANALYSIS, MANPOWER STUDIES), (*PERSONNEL, INDUSTRIAL PSYCHOLOGY), PERSONNEL MANAGEMENT, BEHAVIOR, CLASSIFICATION, PERFORMANCE (HUMAN), CORRELATION TECHNIQUES, PSYCHOMETRICS, LABOR.
Identifiers: WORKER ACTIVITY PROFILE.

This report summarizes a series of exploratory studies relating to worker-oriented job variables. These variables include worker behaviors in jobs and certain job context variables (situational and environmental) that have relevance to human work, as contrasted with job-oriented variables that deal more with the technological aspects of jobs. It is postulated that human work can be characterized in terms of either type of variable. However, for purposes of establishing common denominators across jobs of varied technological types, one must describe jobs more in terms of human behaviors and related variables (what are referred to here as worker-oriented variables).

AD-604 553

Occupational Research Center Purdue Univ Lafayette Ind
THE EXPERIMENTAL USE OF WORKER-ORIENTED JOB VARIABLES IN DETERMINING JOB REQUIREMENTS.
Rept. no. 5.
Joseph William Cunningham and Ernest J. McCormick. Jul 64 2p
Contract Nonr1100 19

Descriptors: (*FACTOR ANALYSIS, MANPOWER STUDIES), (*PERSONNEL, INDUSTRIAL PSYCHOLOGY), (*JOB ANALYSIS, INDUSTRIAL PSYCHOLOGY), BEHAVIOR, LABOR, PERFORMANCE (HUMAN), PSYCHOMETRICS, PERSONNEL MANAGEMENT, ATTITUDE TESTS, PERSONALITY, MOTOR REACTIONS, CORRELATION TECHNIQUES.
Identifiers: WORKER ACTIVITY PROFILE, PERSONNEL SCREENING TESTS.

This study was carried out in order to explore the possibility of the establishment of job requirements. The procedures followed in this study involved the development, for each job, of attribute scores for various human attributes. These were derived as follows: (1) Identification of attributes to be used (42 were selected for this purpose). (2) Rating of each activity of the Worker Activity Profile in terms of the degree to which each such attribute would be required. (3) Derivation of an attribute weight for each attribute on each item of the Worker Activity Profile (a single value for each attribute was derived from the several corresponding ratings). (4) Analysis of each job (in a sample of jobs) using the Worker Activity Profile. (5) Computation, for each job, of an attribute score for each attribute (this score was based on the attribute weights for the various items of the Worker Activity Profile as multiplied by the item value for the job, with these cross-product values summed across all items that were analyzed as being applicable to the job). (Author)

AD-604 554

THE EXPERIMENTAL USE OF DIMENSIONS OF WORKER-ORIENTED JOB VARIABLES IN DETERMINING JOB REQUIREMENTS.
Rept. no. 6.
George C. Thornton and Ernest J. McCormick. Jul 64 2p
Contract Nonr1100 19

Descriptors: (*FACTOR ANALYSIS, MANPOWER STUDIES), (*JOB ANALYSIS, INDUSTRIAL PSYCHOLOGY), (*PERSONNEL, INDUSTRIAL PSYCHOLOGY), NAVAL PERSONNEL, APTITUDE TESTS, MOTOR REACTIONS, CORRELATION TECHNIQUES, PERFORMANCE (HUMAN), BEHAVIOR, PSYCHOMETRIC, LABOR.
Identifiers: WORKER ACTIVITY PROFILE, PERSONNEL SCREENING TESTS.

Three different procedures were used for deriving 'attribute indices' for job factors, these attribute indices being derived for 14 different aptitudes, motor abilities, and physical capacities. These attribute indices, in turn, were used experimentally in two phases of the study. In one phase they were correlated with worker trait requirements of 401 jobs as published by the U. S. Employment Service. These published job requirements were given for the same attributes. The correlations were all significant, and of essentially the same magnitude, as those obtained in the previous study (in which the 192 items were treated individually). In the second phase, the indices of four attributes were derived for 43 Naval ratings (jobs). These, in turn, were correlated with test validity coefficients from 125 test validation studies with these 43 Naval ratings. This analysis resulted in significant relationships for most of the tests and subtests. The results of this analysis were generally more positive than a corresponding type of analysis in the previous study of 140 varied industrial jobs for which published validity data were available. In general, the results of this study lend encouragement to the possibility of being able to establish job requirements through what are essentially job analysis procedures. (Author)

AD-606 004
American Inst for Research Pittsburgh P
A SUGGESTED GUIDE TO POSITION STRUCTURE.
Robert B. Miller. May 56 AFPTC-TM5613
Contract AF18 600 1203

Descriptors: (*JOB ANALYSIS, AIR FORCE PERSONNEL), (*AIR FORCE PERSONNEL, JOB ANALYSIS), AIR FORCE TRAINING, PERFORMANCE (HUMAN), PERSONNEL MANAGEMENT, TRAINING DEVICES, DECISION MAKING, MONITORS, SCANNING, JOB ANALYSIS, MAINTENANCE, TIME STUDIES, TEST METHODS, HUMAN ENGINEERING, MANPOWER STUDIES.

A position is defined as the total set of tasks which might reasonably be performed, on the average, by a single individual during a period of maximum effort such as may occur in simulated or actual combat missions. Position structure is the assigning of all tasks and groups of tasks within an organizational unit to individual positions on the basis of (a) requirements of the organizational unit to accomplish a goal, and (b) the psychological factors going into individual training and performance. The product of this structuring is a position organization table which will provide the data the Air Force may use in establishing official tables of organizations and manning tables. The development of position structures must reconcile solutions to two divergent problems. One of these problems is finding the most efficient and least vulnerable pattern of manpower capability from the standpoint of unit operation. This is an operational problem. The second problem is the related question of the best allocation of duties and tasks to an individual in terms of selection and training economy. This is the psychological problem. A sound table of organization and manning table will be an optimum solution to both the operational and psychological problems.

A SUGGESTED GUIDE TO POSITION-TASK DESCRIPTION.
Robert B. Miller. Apr 56 2p ASPRL-TM566

Contract AF18 600 1203

Descriptors: (*JOB ANALYSIS, WEAPON SYSTEMS), (*AIR FORCE PERSONNEL, JOB ANALYSIS), (*WEAPON SYSTEMS, JOB ANALYSIS), AIR FORCE TRAINING, TRAINING DEVICES, HUMAN ENGINEERING, MAINTENANCE, TEST METHODS, PERFORMANCE (HUMAN), MONITORS, MILITARY REQUIREMENTS, PERSONNEL MANAGEMENT, TIME STUDIES, DECISION MAKING, CONTROL SYSTEMS, SYSTEMS ENGINEERING, MANPOWER STUDIES.
Identifiers: MAN-MACHINE SYSTEMS.

The primary purpose of this guide is to expound methods which may be used for describing job requirements for operation and maintenance of new Air Force weapon systems. The procedures and format suggested in this guide for preparing position-task descriptions are not the only ones which may serve adequately for anticipating the personnel and training requirements generated by new Air Force weapon systems. The procedures described are based, however, upon previous studies in which job information was developed and recorded for the operation and maintenance of certain complex systems. These procedures, therefore, have been tested on a trial basis through application to selected equipment systems. Position-task description represents a means of systematically developing information which is required at one time or another in the multitude of personnel and training actions which must be planned and accomplished before a new weapon system is introduced into the field. It is recognized that for specific purposes less detailed job information may be required than is described in this guide. It is expected that this guide will be helpful in indicating even for these more restricted purposes how the required information might be assembled and recorded.

FRINGE BENEFIT EVALUATION THROUGH THE PROFILE-RANKING METHOD.
Joseph C. Feldmeier Jr. and William A. Groenekamp. Dec 64 2p Rept. no. p-3028
Rept. prepared for publication in Personnel, 1965, Jan - Feb.

Descriptors: (*PERSONNEL MANAGEMENT, STATISTICAL ANALYSIS), (*STATISTICAL ANALYSIS, PERSONNEL MANAGEMENT), MANAGEMENT CONTROL SYSTEMS, MANAGEMENT PLANNING, EMPLOYEE RELATIONS, INDUSTRIAL RELATIONS, MANPOWER STUDIES, BARGAINING.
Identifiers: EMPLOYEE FRINGE BENEFITS.

A profile-ranking technique is developed that compares the contents and coverage of benefit programs, presented by various companies, in terms of their desirability to employees. A list of basic elements included in a benefit program is constructed and these elements are ranked by company representatives in order of importance to themselves and to their employees. An overall, ideal fringe benefit profile can be itemized for the companies surveyed, giving management a clear, concise evaluation of the relative position of its fringe benefit program.

Identifiers: SEA HAWK, PERSONNEL PLANNING INFORMATION, MAN-MACHINE SYSTEMS.

Bureau of Naval Personnel New Developments Personnel Planning Information Documentation Procedures and Formats are presented. The report is specifically designed to assist New Development's analysts and contractors in documenting Personnel Planning Information (PPI) as required for the Bureau of Naval Personnel Personnel Research Reports. These exhaustive Personnel Research Reports provide the basic data source for planned requirements inputs to the CAPRI manpower management system, the preparation of inputs to Technical development Plans (TDP's), Training Plan Conferences (TPC's), and other research studies, and comprise a record of personnel research conducted on new Naval weapon and support systems. This report presents detailed procedures for development of the PPI data, specific examples of formatted information, and an outline of how the PPI data are structured in the Personnel Research Report. Subsequent Bureau of Naval Personnel Operating Instructions will provide specific guidance for utilizing the PPI data to meet TDP, TPC, etc., requirements.

Descriptors: (*ECONOMICS, THEORY), (*PRODUCTION CONTROL, THEORY), (*MANPOWER STUDIES, THEORY), INVENTORY CONTROL, INVENTORY ANALYSIS, MANAGEMENT CONTROL SYSTEMS, COSTS, TABLES, GRAPHS.

The experience curve, or the learning or improvement curve, is based on the theory that each time the total quantity of units produced is doubled, the hours or cost to produce the last unit of this doubled quantity will be reduced by a constant percentage. A 20% decrease in the effort to produce double quantities is referred to as an 80% slope, a 15% decrease as an 85% slope. The pattern of experience curve is hyperbolic when drawn on arithmetical graph paper and is a straight line when drawn on logarithmic (log-log) paper. Factors that contribute to the decline of the unit cost as cumulative production increases are: (1) workers become more familiar with the job due to repetition; (2) development of more efficient tools and machines; (3) improvement in organization and management; and (4) solution of engineering problems. CONTENTS: What is the experience curve; solution of the experience curve using empirical data; examples of experience curve calculations using empirical data; definition of terms; procedures for the use of the experience curve factor tables; experience curve factor tables: 67 through 84%.

THE WARD MANAGER CONCEPT. IS IT FEASIBLE AND DESIRABLE IN A MILITARY HOSPITAL.

Master's thesis.

Robert R. Riedle. 31 Mar 65 2p

Descriptors: (*HOSPITALS, MILITARY FACILITIES), (*NURSES, MILITARY FACILITIES), SUPERVISORY PERSONNEL.

The ward manager concept is regarded as both feasible and desirable in the military hospital. It should help alleviate nursing staffing problems, improve management of the nursing unit, and enhance patient care. It is recommended that a medical administrative supervisor be placed in the position of ward manager on each ward of a military hospital. Should the size and/or activity of a ward not warrant such a position, this person could then be utilized in the capacity of floor manager by overseeing two or more wards as the workload dictates. This person should be assisted by as many medical administrative specialists (administrative clerks) as needed to accomplish the administrative functions of the nursing units. In determining the proper number, consideration must be given to staffing these units during the day and evening shifts seven days per week. This ward manager position is not intended to replace the head nurse, staff nurse or wardmaster. It is felt that by relieving these people of their administrative responsibilities, additional time could be allocated for nursing.

George Washington Univ Washington DC FACTORS INFLUENCING NURSES IN SELECTION OF EMPLOYMENT: A SURVEY OF AN AREA WHERE COMPARATIVELY LOW PAYING COMMUNITY HOSPITALS COMPETE WITH HIGHER PAYING FEDERAL HOSPITALS FOR THE REGISTERED NURSES AVAILABLE.

James E. Gabriel. Jun 65 2p

Available copy will not permit fully legible reproduction. Reproduction will be made if requested by users of DDC. Copy is available for public sale.

Descriptors: (*Nurses, Job analysis), (*Hospitals, Selection), (*Job analysis, Nurses), Wages, Employee relations, Time, Factor analysis, Decision making.

A survey of the registered nurses working in five hospitals in one area reveals that they are influenced to different degrees by a variety of employment factors and are attracted to the hospital that offers the factors they consider most important. Generally, the most important factors to the community hospital nurses are those that make work compatible with home responsibilities; they will sacrifice material rewards in order to have 'choice of shift.' In general, the Federal hospital nurses are most concerned with the more career connected factors of 'pay rate,' 'employee benefits,' and 'advancement.' (Author)

George Washington Univ Washington DC A COMPARATIVE STUDY OF THE EMPLOYMENT CONDITIONS OF NURSES.

Jack C. Bailey. Jun 65 2p

Available copy will not permit fully legible reproduction. Reproduction will be made if requested by users of DDC. Copy is available for public sale.

Descriptors: (*Nurses, Labor unions), (*Hospitals, Personnel management), Bargaining.

Wages, Costs, Medicine, Economics, Minnesota, Texas. Identifiers: Employment.

The study compares the working conditions of nurses in an area with and without collective bargaining for nurses. The geographical areas chosen for comparative analysis are Minneapolis-St. Paul, Minnesota and Dallas-Ft. Worth, Texas. In accomplishing the study, the expressions of hospital officials and nurses from each of the two areas surveyed and on a national scale were solicited and weighed accordingly. The findings indicated that most labor leaders and nurses favored collective bargaining for nurses. The majority of hospital administrators and a substantial number of nurses opposed collective bargaining for nurses. In comparing the employment conditions of nurses from 1950 to 1964 in the two areas surveyed, the findings revealed that nurses under collective bargaining have enjoyed higher wages and better working conditions than nurses not under collective bargaining. However, findings also indicated that where nurses had recourse to collective bargaining, the cost of medical care was substantially higher in contrast to national averages and averages in the area which did not bargain collectively with nurses. EVALUATION OF OFFICER JOBS VERSUS EVALUATION OF SPECIALTIES.

Joe L. Hazel and Joseph M. Madden. Mar 65 2p

Rept. no. PRL TR-65-7

Descriptors: (*Job analysis, Air Force personnel), (*Air Force personnel, Job analysis), (*Officer personnel, Job analysis), Personnel management, Wages, Classification, Specifications, Correlation techniques.

Evaluation data on 30 officer specialties were gathered from 2 groups of raters for comparison with results previously obtained when jobs were evaluated. With the same 20 factors used previously, 88 officers evaluated the specialties on a point scale against a criterion of merited pay, and another 86 against a criterion of merited grade. In addition, each officer rank-ordered the 30 specialties in terms of the criterion for his group. Correlation matrices were computed based on the mean factor ratings and mean rank-orders of specialties. Differences in evaluation results were as follows: (1) A comparison of matrices based on jobs and specialties revealed there were more negative intercorrelations among factors when ratings were made on specialties (32%), than when jobs were rated (9%). (2) For 15 factors, tests of the differences between validity coefficients on the 4 criteria (merited pay and grade of jobs and merited pay and grade of specialties) indicated the 4 values were not all estimates of the same population value. (3) From multiple regression analyses to predict rank-order from factor ratings, more factors were found which had non-zero weights on job-based criteria than on specialty-based criteria. Because of certain advantages with jobs, and the heterogeneity of pay and grade levels within specialties, jobs seem to be the preferable units to use in a point system of evaluation. (Author)

Iowa State Univ Iowa City DEVELOPING AN EFFECTIVE MANAGEMENT TOOL FOR THE INTERNAL DISTRIBUTION OF MANPOWER RESOURCES IN A THOUSAND-BED UNITED STATES AIR FORCE HOSPITAL.

Master's thesis.

Jerry L. Moore. Jun 65 2p

Contract AF33 608 1072

Available copy will not permit fully legible reproduction. Reproduction will be made if requested by users of DDC. Copy is available for public sale.

Descriptors: (*Hospitals, Personnel management), (*Air Force, Hospitals), (*Medical personnel, Standards), Manpower studies, Military medicine, Nurses.

A study was made to determine an effective means of distributing personnel on the basis of workload. The study was of a statistical nature, examining relationships between many variables and developing standards based upon these relationships. The primary measure of workload was a device currently in use by the Air Force Medical Service known as the Composite Weighted Work Unit. This mechanism applies weighted values to four factors accounting for patient care workload - occupied beds, admissions, births, and outpatient visits - and treats the combined result as a composite measure of workload. This study tested the Composite Weighted Work Unit's adaptability for internal use within a large hospital in measuring departmental workloads against an overall hospital workload, thereby providing a basis for reviewing the distribution of manpower resources. Indications are that a composite-weighted work unit, carefully developed and judiciously applied, can be a valuable management tool in the administration of a large and complex hospital organization. A STRUCTURED APPROACH TO PERFORMANCE APPRAISAL AND SALARY ADMINISTRATION.
George P. West. 21 Jun 65 2p Rept. no. SP-2130

Descriptors: (*Performance (Human), Job analysis), (*Job analysis, Wages), (*Wages, Performance (Human)), Performance tests, Training, Motivation.

Conflicting requirements inherent in performance appraisals for salary administration are contrasted to performance appraisal for counseling or training of the individual. An intermediate approach is suggested which resolves these conflicts and provides worthwhile feedback to the individual, while at the same time administering salary actions consistently with performance. The process utilizes work-related goals. The supervisor works with the individuals to find challenging work assignments for all his subordinates and evaluates the work, pointing out specific areas of weakness or of unusually high quality work. Comparison is made to an imagined average or typical individual. By relating the quality of the work performed by different individuals (as measured by the common traits score), the supervisor can recommend salaries consistent with the quality of the work accomplishments of his people. Descriptors: (*Naval personnel, Selection), (*Job analysis, Maintenance), Weapon systems, Instruction manuals, Classification, Psychometrics, Operators (Personnel), Machines, Heat exchangers.
Identifiers: SAMOA.

Research was conducted to develop a method for determining the basic technical skills for current and future weapons and support systems so as to provide the basis for the Navy enlisted personnel classification structure required for the next decade. The engineering department in destroyers was selected for the pilot study. The method being developed in this research involves the analysis of tasks and patterns of tasks in terms of the Technical, Organizational, and Communicational dimensions of the work situation. The acronym SAMOA (Systematic Approach to Multidimensional Occupational Analysis) was adopted as a label for this method. In developing the variables that characterize the Technical dimension, techniques for measuring the 'complexity' and 'variety' of tasks were devised. The report contains the following sections: structure of functions scales, equipment rating form, engineering task lists, task complexity classification list, task comparison forms.

MAN-JOB MATCHING AND PERSONNEL INFORMATION MANAGEMENT.
Professional paper.

John M. Leiman. 3 Aug 65 2p Rept. no. SP-2160
Prepared for presentation at the NATO Conference on Operational and Personnel Research in the Management of Manpower Systems at Brussels (Belgium) 16-20 Aug 65.

Descriptors: (*Manpower studies, Job analysis), (*Job analysis, Manpower studies), (*Personnel management, Psychometrics), Performance (Human), Personality, Motivation, Reviews, Analysis of variance.

The paper provides: a description of a model for the man-job matching process; a discussion of the various constraints and assumptions necessary to make the model applicable to typical operational conditions; and a discussion of the state-of-the-art in the prediction of job performance in new assignments. 'Hard' variables are defined as personal characteristics which are related to measurements of a man's current skills and knowledge - these were found to account for about half the variance in job performance in new assignments. 'Soft' variables are defined as personal characteristics related to a man's motivation or the manner in which he applies his skills and knowledge in new situations - these were found to have only marginal utility in the prediction of performance in new assignments. The paper then describes a procedure for developing job performance indices which are required inputs to the man-job matching model described earlier. (Author)

A COMPARISON OF RECOGNITION AND RECALL METHODS OF OBTAINING JOB INFORMATION.

Doctoral thesis.
Joseph Edward Zuro. Aug 65 2p
Contract AF41 6091604

Descriptors: (*Job analysis, Air force personnel), Officer personnel, Supervisory personnel, Recall, Memory, Manpower studies, Personnel management, Sampling, Statistical analysis, Correlation techniques.

The study was designed to determine whether there are significant differences in quantity and quality of job information obtained by recognition and recall methods of job analysis, as represented by two checklist inventories and an open-end questionnaire. A secondary purpose was to determine whether there are significant differences in the job information obtained by two checklist inventories which differ in the source of the data used in their construction. One, designated a recall source inventory, was prepared from recall information submitted by job incumbents. The other instrument, designated a recognition source inventory, was constructed by subject matter experts. From a population of 575 jobs whose incumbents had completed the three survey instruments, a stratified sample of 22 jobs was selected.

A MODEL OF JUNIOR OFFICER JOBS FOR USE IN DEVELOPING TASK INVENTORIES.
Technical rept.,
Harry L. Ammerman. Nov 65 2p Rept. no. TR-65-10
Contract DA-44-188-ARO-2

Descriptors: (*Job analysis, Personnel management), (*Officer personnel, Job analysis), (*Army personnel, Job analysis), (*Personnel management, Job analysis), Decision making, Military training.

A job description procedure was developed for use by Army service schools in identifying all of the tasks performed by junior officers in a job assignment. This procedure was based on a model of officer job behavior, illustrating the nature and sequence of tasks performed to attain specific goals within each area of responsibility. The behavior model was itself developed from considerations of existing job descriptions, the nature of job information typically provided by interviews with officers, and an information-processing view of purposive behavior. Application of the description technique to one officer job yielded 816 tasks covering troop leadership and unit management, as well as tactical and technical functions. General statements of work were effectively broken into task-level statements of job activities. The technique should provide a practical means for describing most supervisory and command jobs characterized by a high proportion of variable, nonroutine, and covert activities. (Author)

THE USE OF STATISTICAL CONTROL CHART TECHNIQUES IN A SICK LEAVE CONTROL PROGRAM.
Final rept.,
Roy M. Wimpee and James H. Smith. Oct 65 2p

Descriptors: (*Personnel management, Industrial medicine), (*Industrial medicine, Personnel management), Statistical analysis, Quality control, Medicine, Management engineering, Government employees, Civilian personnel, Public health, Costs.

Sick leave records can be analyzed by control charting techniques such as are commonly used in statistical quality control. These techniques do three things: (1) compute the amount of variation in the sick leave rate that can be expected from normal chance variations, (2) compare this value with the actual variations experienced, and (3) identify variations that are too large to explain by chance. Organizations with large variations have

some definite cause -- some specific health problem e. other than normal chance variation affecting their sick leave rate. After identifying the organizational components with health problems in this way, medical personnel can be directed to those specific areas to find and eliminate the health problems. This procedure directs professional medical assistance to those areas where it is needed, without the expense of using medical talent in all areas. One such method of statistical analysis of sick leave records, developed for and used by a large industrial organization, is described. (Author)

THE FEASIBILITY OF DEVELOPING A TASK CLASSIFICATION STRUCTURE FOR ORDERING TRAINING PRINCIPLES AND TRAINING CONTENT.
Research memo.
Donald F. Haggard Jan 63 2p

Descriptors: (*Behavior. Classification), (*Training. Management engineering), (*Job analysis. Classification), Military training, Feasibility studies, Learning, System engineering.

The report explores the need for developing a method of systematic analysis, description, and classification of behavioral events as a preliminary step in evolving generalized theoretical formulations and utilizing available knowledge. The theory and methodology of taxonomy are reviewed in relation to the problem of integrating empirical knowledge obtained from discrete behavioral events. Current efforts to construct taxonomic systems for behavior are examined. An organization of effort is suggested for further development of (1) a theoretical framework for interrelating behavioral research at all levels of generality and (2) a more restricted task classification system for ordering training principles and training content. IDENTIFICATION OF JOB REQUIREMENT FACTORS BY USE OF SIMULATED JOBS.
Joseph M. Madden and M. Joyce Georgia 1965 2p
Availability: Published in Personnel Psychology. A Journal of Applied Research, v18 n3 p321-31 1965. Copies to DDC users only.

Descriptors: (*Air force personnel, Job analysis), (*Job analysis, Air force personnel), (*Officer personnel, Job analysis), Simulation, Factor analysis, Identification, Verbal behavior, Wages.

Air Force officer jobs are evaluated by rating a verbal job description on ten requirement factors. If these factors cover all the requirements, judging merited pay or grade for the job incumbent could be based on a simulated job description presenting only the numerical ratings on the ten factors. To test this assumption, two groups of USAF majors ranked thirty real job descriptions and two groups ranked simulated descriptions in order of merited pay. Application of a multiple regression technique to the factor values showed that error in predicting the rank-order criterion was significantly greater for rankings from simulated descriptions than from the verbal descriptions. Examination of mean-rank discrepancies showed that, in this particular sampling of jobs, the ranking of simulated jobs was higher for jobs closely concerned with the primary defense mission and lower for jobs requiring a high level of scientific, professional, or technical competence. Adding ratings on these two factors to the simulated descriptions might result in judgments closer to those obtained from verbal descriptions. (Author)

EVOLUTION OF A JOB INVENTORY AND TRYOUT OF TASK RATING FACTORS.
Joseph E. Morsh Dec 65 2p Rept. no. PRL-TR-65-22.

Descriptors: (*Air force personnel, Job analysis), (*Job analysis, Air force personnel), Air force training, Personnel management, Classification, Identification, Learning, Performance (Human), Programming (Computers), Strategic Air Command, Identifiers: On-the-job training.

The results of surveys of the Personnel Career Field conducted in 1959, 1961, 1963, and 1964 are reported. Improvements in inventory content and format and in administrative procedures were incorporated with each successive survey. In the last 2 surveys incumbents completed a background information sheet and rated the relative time spent on tasks. A computerized hierarchical grouping procedure applied to the time-spent data was used to identify and describe job types. In the 1962 survey 35 significant job types were found. In the 1964 survey 34 job types were identified. Job types tend to cut across commands and to some extent across grades and specialties. In the 1964 survey, in addition to relative time spent, subsamples of incumbents used 4 other task rating factors: technical assistance required, frequency of performance, difficulty of learning by on-the-job training, and training emphasis. Results of the tryout of these ratings are also reported. (Author)

OFFICER GRADE REQUIREMENTS PROJECT. II. JOB DESCRIPTIONS, SAMPLE SELECTION, AND CRITERION BOARD.
Joe T. Hazel Nov 65 2p Rept. no. PRL-TR-65-18.

Descriptors: (*Air force personnel, Officer personnel), (*Officer personnel, Selection), (*Job analysis, Officer personnel), Military requirements, Classification, Standardization, Tables.

The Officer Grade Requirements Project was undertaken to determine an optimal Air Force officer grade structure, stated in terms of the number of officers required in grades lieutenant through colonel. Due to its scope, several reports are necessary to explain the project. The first report of the series gave the purpose, phases, and a description of the method and preliminary findings. The present report describes in detail the three following steps of the project: (1) development of a suitable format and collection of standardized job descriptions of the work performed by approximately 80,000 officers; (2) selection of a

criterion sample of 3,575 descriptions representing all levels and types of officer jobs; (3) selection and conduct of a Headquarters USAF Policy Board to provide criterion measures (grade ratings) for the job sample. (Author)

THE IDENTIFICATION, MEASUREMENT AND FACTOR ANALYSES OF 'WORKER-ORIENTED' JOB VARIABLES.
Rept. no. 3.
George G. Gordon and Ernest J. McCormick Jul 63 2p Rept. no. Contract Nonr-1100(19)

Descriptors: (*Industrial psychology, Job analysis), (*Job analysis, Factor analysis), Employment, Measurement, Identification, Psychometrics, Personnel, Applied psychology, Reliability, Performance (Human), Correlation techniques.

The following conclusions were drawn from the results of the study: (1) Jobs can be viewed from a framework of the activities that the incumbent performs; yet this framework need not be so specific that it cannot be generalized across different jobs, occupations, industries or geographical areas. (2) The application of psychological scaling techniques to the measurement of job variables is quite fruitful, even in the light of the effort that must be expended in scale construction. In each reliability study, the average reliability of the scaled items was clearly superior to that of the other items. (3) The factor analyses of worker-oriented variables defined a number of dimensions which seemed to be both meaningful and potentially useful. It was especially encouraging to note relationships between the factors emerging from this study, and those found in other studies of worker traits or job requirements. (Author)

A NETWORK FLOW TECHNIQUE FOR OPTIMIZING PERSONNEL ON BOARD BY PAY GRADE

Research rept.
Donald F. Hayter and Richard D. Conner. Feb 66
2p Rept. no. SRR-66-12.

Descriptors: (*Personnel management, Programming (Computers)), (*Naval personnel, Optimization), Models (Simulations), Recruitment, Flow charting, Manpower studies, Mathematical prediction, Iterative methods.

The report describes one of a series of computerized techniques developed by this Activity in a continuing research program to provide the Bureau of Naval Personnel with new and improved methods for carrying out its enlisted personnel planning functions. The technique is based upon a network flow model uniquely designed for allocating present and future enlisted manpower resources within the limits of constraining factors in a manner that will meet manpower requirements as closely as possible. In short, it is a planning technique for optimally allocating personnel on board at all pay grades of a rating for the next five years. The model considers the present number of personnel on board at each pay grade of a rating and will attrite and advance them realistically in future time periods. The future allocation of personnel among pay grades is optimized for a five-year period relative to the pay grade requirements within the constraints of predicted personnel attrition, advancements, reductions in grade (demotions), and the nonpetty officer base. NAVPERS-PFB-66-3
Contract Nonr-4751 (00)

Descriptors: (*Human engineering, Handbooks), Data, Systems engineering, Analysis, Maintenance, Personnel management, Time studies.

The guidebook was developed primarily as a reference to aid the Project Officer in the assessment of human factors effects on system performance and in the isolation of the causal factors. There are three sections to this guidebook, each serving a different purpose. Section I provides the necessary background information and sets the perspective for the use of the techniques and materials presented in Section II. This section contains the tools and techniques for system evaluation. This includes methods for obtaining time, accuracy, and maintenance data as well as the techniques for analyzing and interpreting these data. Methods for obtaining qualitative data through questionnaires and checklists are also contained in this section, including sample questionnaires and checklists. The third section (Section III) contains a fairly detailed example of the application of the previously described techniques. Also included are rather complete lists of test objectives and criteria measures. (Author)

QUALITY COST ANALYSIS IMPLEMENTATION HANDBOOK,
Donald E. Morgan and W. Grant Ireson. 15 Sep 64
2p
Contracts AF 18 (600)-2021

Descriptors: (*Cost effectiveness, Handbooks), (*Quality control, Costs), Optimization, Management planning, Management control systems.
Identifiers: Cost analysis.

The QUICO (Quality Improvement through Cost Optimization) system covers the planning, installation, and use of quality cost data analysis. The basic idea is simply to operate a manufacturing unit or complex so that the total of quality related costs is a minimum. Quality related costs are made up of (1) expenses incurred because of not producing the highest possible quality (resultant costs), (2) expenditures made to create conditions resulting in high quality products (quality creation costs), and (3) expenditures made to measure quality levels being produced and causes of deficiencies (quality and defect inference costs). Analysis of quality cost data provides direct pay-offs in reduction of resultant costs and the major sources are discussed. Secondary benefits come from use of the data as a measurement of the effectiveness of the quality assurance effort, as a motivator to workers who must produce the high quality, and as a management guidance tool. Suggested cost accounts are given along with suggested methods of summarizing and displaying data in the most meaningful way for all levels of use. Almost all companies now have sufficient cost data to estimate cost reductions to be expected from the QUICO system. (Author)

PATTERNS AND TRENDS OF CONTROLS GOVERNING THE PROFESSIONAL ACTS OF HOSPITAL NURSING PERSONNEL.
Joseph A. Baird Jr. Apr 66 2p
Contracts AF 33 (608)-1232.

Descriptors: (*Nurses, Personnel management), (*Job analysis, Nurses), Hospitals, Law, Control.

In order to control the scope of hospital nursing practice, six patterns of control have evolved: control by statutes, court interpretation of statutes, opinions of state attorneys general, state administrative boards, private organizations, and hospital policy-making bodies. The effectiveness of these controls and the legal limitations on nursing acts have varied from state to state. Some general nursing practice parameters have been set, but the lines have been poorly marked and there are still many gray areas in hospital nursing practice. This has led to trends to modify the controls to correct their weaknesses. These have simply been trends, so that in many situations nurses still do not know their legal limitations. The problem still exists. One solution in the form of a realistic formal plan is available to nurses if they will unite to install the plan to resolve scope of practice questions in each state as they arise. (Author)

THE DERIVATION, ANALYSIS, AND CLASSIFICATION OF INSTRUCTIONAL OBJECTIVES.
Technical rept.,
Harry L. Ammerman and William H. Melching. May 66 2p Rept. no. TR-66-4.
Contracts da-44-188-ARO-2.

Descriptors: (*Education, Management planning), (*Job analysis, Education), Performance (Hu-

man), Students, Analysis, Psychometrics, Behavior.

An examination of the methods, terms, and criteria associated with the determination of student performance objectives was made in order to synthesize and apply the relatively new developments in Human Factors research on this subject. Educational and training research literature on the subject was examined to identify procedures currently being used or proposed. A survey of eight Army service schools was conducted to determine procedures employed by instructional personnel in determining course content. On the basis of data obtained, important problems arising in connection with the development of objectives are identified and analyzed. A system for analyzing instructional objectives by identifying factors that influence their meaningfulness and usefulness was developed. Types of student performance objectives are listed, and a classification scheme for terminal objectives is suggested. The classification is based on five factors on which a statement of an objective may vary, affecting the nature of the student action description and the communicability of the statement itself. The variety of terms associated with objectives are discussed. (Author)

PROBABILISTIC MANPOWER FORECASTING.
Master's thesis,
James Fitzhugh Koonce. May 66 2p

Descriptors: (*Manpower studies, *Management planning), (*Probability, Manpower studies), Mathematical prediction.
Identifiers: Theses.

The use of the methods presented in this report are limited only by the availability of accurate data. Any organization that does not presently employ a system of preparing and using planning data will undoubtedly find it difficult to initiate such a data gathering network. However, use of the statistical techniques embodied in this report will provide a manpower planning system that is more up-to-date than most now in use. These methods give realistic planning figures that take into account the likelihood that some projects will not materialize. In addition, many other planning costs, such as hiring and layoff, purchase and salvage, and several types of operating costs, can be derived from such a manpower plan. Additional study in these areas is presently under way by the research group. The major result of using these techniques will be to provide top management with a 'look-ahead' capability that will pin-point real and potential problem areas in budgeting and in large fluctuations in manning. By identifying these problems before they arise, economical and efficient improvements to long range plans can be made early enough to avoid expensive mistakes. By thus preventing or greatly reducing large wastes, the organization will be able to fulfill its mission more economically. In short, this research has developed a powerful tool for management's use. (Author)

A COMPUTER TECHNIQUE FOR CLUSTERING TASKS.

Progress rept.
Joe Silverman. Apr 66 2p Rept. no. STB-66-23
See also AD-465 851, 620 839, -620 840.

Descriptors: (*Job analysis, Statistical processes), (*Statistical processes, Data processing systems), Computers, Human engineering, Classification, Naval personnel.
Identifiers: SAMQA, Clustering (Psychology).

The report describes an advanced computerized technique for clustering work tasks. The ultimate objective of this research is to devise a method for

determining the basic technical skills needed to man current and future weapons and support systems in order to provide a basis for the Navy enlisted personnel classification structure required in the next decade. This technique produces homogeneous clusters of task patterns using an input of tasks performed in a simple of jobs. These clusters represent the occupational specialties that exist in a field of work. The most important features of this technique are: (1) its capacity for computer analysis of task patterns of large numbers of subjects; (2) its capability for computer assistance in making research decisions at various levels of task analysis; and (3) its flexibility as a tool of pattern recognition and structuring. With only minor modifications, the computer programs and concepts described in this report should be of interest of those concerned with other clustering, classifying, and taxonomic techniques. SAMOA-A METHOD FOR DETERMINING WORK REQUIREMENTS.
Research rept.
Malcolm J. Carr and Joe Silverman. Jun 66 2p
Rept. no. SRR-66-23

Descriptors: (*Job analysis. Data processing systems). (*Naval personnel. Classification). Selection. Weapon systems. Computers. Programming (Computers).
Identifiers: SAMOA.

The report outlined the development of the SAMOA method for occupational analysis. This method may be characterized as (1) a multidimensional approach which stresses the 'work situation' and (2) a set of quantitative computerized techniques for the application of this approach. The identification of homogeneous work clusters on the basis of technical, organizational, and communicational dimensions which the SAMOA method provides should, when analyzed together with various administrative constraints, provide the basis for a sound Navy enlisted personnel classification structure. The SAMOA method also provides a number of additional advantages in regard to methodology. First, the computerized data processing programs provide a very rapid means for analyzing work requirements data (e.g., task lists, contact data, personal and organizational information, etc.) provided from any source. Second, the major phases of the method are independent so that data pertinent to any one of the three dimensions can be analyzed separately; i.e., clusters can be developed without analyzing TOC variables, and variables can be analyzed relative to work groups without using the clustering techniques. Finally, the techniques are adaptable for use with other variables, such as those normally used in job evaluation studies. (Author)

JOB EVALUATION: SELECTING THE TYPE OF SYSTEM FOR NAVY USE.
Progress rept.
Alexander J. Rose. Nov 66. 25p WRM-67-7
See also AD-639 165.

Descriptors: (*Job analysis. Navy). (*Personnel management. *Naval personnel). Factor analysis. Classification. Management engineering.

This is the third in a series of research reports leading to the design and development of a billet evaluation system for Navy enlisted billets. This report analyzes and reviews the four conventional methods of job evaluation in terms of their application to Navy billets. The report concludes that the point rating method of job evaluation is the best technique for determining the relative value of Navy billets. It recommends that work proceed on developing the details of a point rating system

tailored to the mission and needs of the Navy. (Author)

THE DESIGN OF INSTRUCTIONAL SYSTEMS.
Technical rept.
Robert G. Smith, Jr. Nov 66. 92p TR-66-18
Contract DA-44-188-ARO-2

Descriptors: (*Training. Cost effectiveness). Programmed instruction. Training devices. Transfer of training. Systems engineering. Learning. Students. Performance (Human). Teaching methods. Efficiency.

The report, based on an extensive survey of current literature, describes and discusses a system approach to designing training and considers factors bearing on training effectiveness. An efficient instructional system is conceived as one in which the components form an integrated whole, achieving maximum effectiveness at the least possible cost. Components considered in this report include presentation, media, student management, techniques for practicing knowledge and performance, knowledge of results, directing student activities toward the goals of the training program, and testing and evaluating the system in terms of efficiency and cost. PROPOSED CONTENT OF AN ENLISTED PERSONNEL COST MODEL.
Roy W. Gettings. Dec 66. 63p WRM-67-18

Descriptors: (*Naval personnel. Costs). (*Cost effectiveness. Naval personnel). Naval training. Computer programs. Data processing systems. Input-output devices. Budgets. Standards. Systems engineering. Military personnel.

This report presents an outline of a proposed enlisted personnel cost model. The need to develop such a computerized cost model has become evident with the increasing number of requests for cost data from a wide variety of Navy and Department of Defense offices. The approach has involved an analysis of the present enlisted personnel cost system in terms of input, processing, and output. Revised outputs have been designed to provide concise reports of information frequently required. Modifications to the training cost reports are recommended as necessary to provide the revised outputs.

RELIABILITY OF JOB RATINGS AS A FUNCTION OF TIME SPENT ON EVALUATION.
Joe T. Hazel. 1966. 4p
Availability: Published in Journal of Industrial Psychology v4 n1 p16-9 1966.

Descriptors: (*Job analysis. Reliability). (*Time studies. Job analysis). Factor analysis. Identifiers: Evaluation.

The study was undertaken to determine whether reliability increases as a function of the time spent by raters in providing job evaluations. The results showed that there is no optimal or desirable time period for raters to spend on the job evaluation task in order to achieve more reliable ratings. There was no indication of a substantial trend for reliability of job ratings to increase as a function of the time spent on evaluation. The data also suggests that slower raters are not more indecisive in assigning ratings than rapid raters. (Author)

JOB ANALYSIS: SELECTING THE TYPE OF SYSTEM FOR NAVY USE.
Mark E. Johnson. Feb 67. 27p Rept no. WRM-67-23

Descriptors: (*Job analysis. Personnel management). (*Personnel management. Naval personnel). Inventory. Computers. Information retrieval. Data storage systems. Data processing systems. Training.

The principal objective of this report is to design and develop a multi-purpose occupational analysis system. The system will provide current, accurate, detailed information for users of occupational data, and will also serve as a basis for further studies in associated fields of personnel management. In the phase of the study reported here, methods of occupational analysis used by other military services and the Department of Labor, reported previously, are reviewed briefly and appraised in terms of their applicability to Navy billets. A method for developing an occupational analysis system suitable to the Navy is proposed. It employs the most recent advances in the techniques of collecting, analyzing, storing and retrieving occupational information. The method proposed calls for the establishment of a computerized occupational data bank, and for the use of billet inventories in the collecting of occupational information. The report recommends that the proposed method be used to conduct an occupational analysis of the Boatswain's Mate and Radioman ratings, and that this work be considered as a pilot test of the method for its subsequent application to all Navy enlisted billets.

AMOUNT OF ASSIGNMENT INFORMATION AND EXPECTED PERFORMANCE OF MILITARY PERSONNEL.
Technical research rept.
Richard C. Sorenson. Feb 67. 57p Rept no. APRO-TRR-1152

Descriptors: (*Military personnel. Performance (Human)). (*Manpower studies. Military personnel). Computers. Automation. Personnel management. Optimization. Predictions. Least squares method.

THE COMPUTERIZED MANPOWER SYSTEMS
Task seeks to integrate the growing body of psychological, mathematical, and computer technology in the solution of problems in military manpower. One of its objectives has been to develop computer-aided research approaches and simulation tools useful in (1) defining general principles of manpower systems and (2) formulation and evaluation of manpower policies and

procedures. Technical Research Report 1152 summarizes the research methodology developed or adapted by the U. S. Army Personnel Research Office to deal with manpower information problems. Particular concern is with relationships between the amount and type of information on which assignment decisions are made and the performance of the Army's enlisted personnel. Typical findings are: Total performance of Army enlisted personnel could be enhanced by using as performance estimates in optimal assignment procedures the full 2- or 3-digit scores on qualification measures. The effect of the one-digit score is more serious when the range of ability in the allocation group is narrow and when the general level of ability is lowered. More precise prediction of job performance could be attained by introducing performance estimates more closely resembling least squares regression estimates based on the full Army Classification Battery. Total performance could be increased by refinement of the Army Personnel System to afford additional job categories. Optimization techniques may be beneficially applied in the manpower system even though estimates of performance are ordinal (including various ways of ranking) and the assumption of an interval scale is not strictly met.

COST-EFFECTIVENESS: SOME TRENDS IN ANALYSIS.
 E. S. Quade. Mar 67. 19p Rept no. P-3529
 Prepared for presentation during the course, "Cost Effectiveness-The Economic Evaluation of Engineered Systems", held at the California Univ., Los Angeles. 27-31 Mar 67.

Descriptors: (*Cost effectiveness, Systems engineering). (*Man-machine systems, Computers). Decision making. Game theory. Interactions. Predictions. Operations research. Mathematical analysis.

Cost-effectiveness analysis is not a static craft; while it still may be more an art than a science, its practitioners are constantly striving to widen its area of application and to improve it by introducing better methods of analysis. New approaches and techniques are being proposed constantly. Most of these are primarily mathematical in nature, but a few are directed toward a better treatment of those aspects of its problems that cannot be handled by purely quantitative methods. Emphasis in this paper will be on the latter. The author does not attempt to be comprehensive but merely notes three trends involving, respectively: computers, mathematics, and the direct use of expertise. The author discusses the first two only briefly, but describes the last in some detail.

COMPUTATION OF GROUP JOB DESCRIPTIONS FROM OCCUPATIONAL SURVEY DATA.
 Wayne B. Archer. Dec 66. 41p Rept no. PRL-TR-66-12

Descriptors: (*Job analysis, *Air force personnel). Medical personnel. Performance (Human). Classification.

The analysis of occupational survey data is demonstrated in detail, using miniature examples. Beginning with the responses of 10 incumbents to a job inventory consisting of 10 task statements, composite job descriptions are derived for (a) special groups of incumbents, selected on the basis of background information data; and (b) job type members, identified by an automated job clustering program. Computer outputs from both types of analyses are illustrated and explained. (Author)

Descriptors: (*Military medicine, Documentation). (*Casualties, Military medicine). Medical personnel. Models (Simulations). Cost effectiveness. Reports. Medical supplies. Military intelligence. Data processing systems. Feasibility studies. Evacuation. Military organizations. Communication systems. Logistics. Management engineering. Hospitals. Job analysis.

The Patients Accounting Functional Area is that process which provides for the collection, recording, summarizing, and reporting of data regarding patients hospitalized and/or evacuated in the Army in the field. It includes the responsibility for satisfying those essential patient data requirements of elements or agencies superior to, or in support of, medical treatment facilities in a theater of operations. This document describes the current patients accounting system in one division, one corps, one field army, and one theater army command. It is assumed that these operations will be applicable in all similar organizations; i.e. one division operation typifies all divisions, one corps typifies all corps, etc.

Medical regulating is that part of the overall sphere of medical operations which coordinates and controls the movement of patients to the medical facilities which are best able to provide care at that time. Many factors are considered in controlling the movement of patients through the hospitalization and evacuation system. Some of these factors are current bed status of treatment facilities (i.e., beds occupied, not occupied); surgical backlog in hours; location of facilities with specialty capabilities; number and location of patients by diagnostic category; tactical situation in the combat zone; location of airfields and railheads; medical resources available at each treatment facility; and availability of transportation.

IMPACT OF THE COMPUTER ON JOB ANALYSIS IN THE UNITED STATES AIR FORCE.
 Joseph E. Marsh, and Raymond E. Christal. Oct 66. 25p Rept no. PRL-TR-66-19

Descriptors: (*Job analysis, Computers). (*Automation, Air Force). Air Force personnel. Inventory control. Data processing systems. Computer programs. Reviews. Performance (Human). Management planning. Sampling.

In keeping with present trends toward the automation of personnel information, the Air Force method of job analysis provides for the exploitation of advances in electronic computer technology. Computer capability is applied not only in the analysis of job inventory data but also in the construction, administration, and publication phases of the procedure. During inventory construction the computer is used to prepare alphabetic lists of tentative task statements according to pertinent key words. This grouping by topic facilitates the detection of redundancy and insures the elimination of duplicate statements. In the administration phase, the computer selects the required sample of job incumbents from current personnel rosters maintained on magnetic tape. In addition, the computer prints names and addresses on appropriate labels to attach to inventories for mailing. It is in the area of occupational data analysis, however, that the computer makes its most impressive impact. By application of a complex program consisting of over 50,000 instructions, those incumbents in a survey sample who perform essentially the same job are grouped together, and a job description composed of duties and tasks is published for each such job type identified. The computer also lists information available for each case and reports means, standard deviations, and distributions of values for specified variables. Composite job descriptions may also be obtained for any group defined in terms of job-related variables such as grade, specialty, years of experience, or specialized training. (Author)

JOB ANALYSIS: AN ASSESSMENT OF APPLICABILITY OF ANALYSIS SYSTEMS OF OTHER SERVICES TO NAVY ENLISTED BILLETTS.
Mark E. Johnson. Nov 66. 49p Rept no. WRM-67-9
See also AD-649 555.

Descriptors: (*Job analysis. Personnel management). (*Personnel management. Naval personnel). Inventory. Questionnaires. Training. Computers. Information retrieval. Data storage systems. Data processing systems.

As a basis for approaching the development of a Navy job analysis system, the standard procedures in job analysis are analyzed and reviewed, together with recent developments in the field. Limitations upon the research are identified, and some of the underlying assumptions are indicated. Criteria for a Navy job analysis system are proposed. Industrial and governmental practices in job analysis are discussed, particularly the systems followed by the U. S. Marine Corps, the U. S. Air Force, and the U. S. Army, and their use for Navy purposes is appraised. Procedures followed by the U. S. Department of Labor are also examined. It is concluded that, while certain aspects of the Air Force and Marine Corps job analysis systems may pertain to the Navy, a job analysis system which is satisfactory for the Navy must be developed to accommodate the Navy's unique characteristics and requirements. STUDIES IN THE COMPUTERIZATION OF ENLISTED CLASSIFICATION: I. A HIERARCHY OF CRITERIA FOR COMPUTERIZED CLASSIFICATION OF ENLISTED MEN. II. TRAINING COST MINIMIZATION AS A CRITERION FOR PERSONNEL CLASSIFICATION. III. SHORT-TERM FLUCTUATIONS IN CLASS 'A' SCHOOL QUOTAS.
Research memo.
Bernard Rimland, Edward F. Alf, Jr., and Leonard Swanson. Nov 66. 21p Rept no. NPRA-SRM-67-10

Descriptors: (*Naval personnel. Classification). (*Manpower studies. Computers). Recruiting. Training. Costs. Reduction. Simulation. Money. Performance (Human).

The report consists of three brief papers presenting several aspects of the ongoing research program at the U. S. Naval Personnel Research Activity, San Diego, concerned with computerizing enlisted classification. The first paper provides an overview of planned and alternative approaches to a central issue in computerized classification, namely: what are the goals the computer will maximize. The second paper presents the mathematics behind one goal currently being investigated--cost reduction, as measured in dollars spent in training. The results of a small scale simulation study are reported. The third paper emphasizes the need for computerization by showing how fluctuations in short term demand can create brief and expensive periods of "feast or famine" in the available manpower pool even when the longer-term manpower supply may be stable and adequate. A SIMULATION STUDY OF LABOR EFFICIENCY AND CENTRALIZED LABOR ASSIGNMENT CONTROL IN A PRODUCTION SYSTEM MODEL.
Rosser T. Nelson. Sep 67. 30p Rept no. WMSI Working Paper-126
Contract Nonr-233 (73)

Descriptors: (*Management engineering. *Industrial research). (*Labor. Performance (Human)). Models (Simulations). Queueing theory. Job analysis. Operations research. Industrial production. Efficiency. Control.

The paper reports a set of simulation experiments designed to study service systems in which labor interchange is possible among service stations. It is one of a series of studies in which the author has explored design and control aspects of labor and machine limited production (service) systems. The interrelationships among four experimental variables are investigated in terms of resulting system performance statistics. The variables are the job routing structure which describes the flow of work through the service facilities, the queue discipline, the efficiency of labor interservice facilities, the queue discipline, the efficiency of labor interchange, and the degree of centralized control exercised in labor assignment. THE INTERACTION OF PERSONALITY AND INTELLIGENCE IN TASK PERFORMANCE.
David Kipnis, and Carl Wagner. 1965. 14p
Availability: Published in Educational and Psychological Measurement v25 n3 p731-44 1965.

Descriptors: (*Personality. *Behavior). Social psychology. Motivation. Performance (Human). Intelligence tests. Personality tests. Aptitude tests. Naval personnel. Predictions.

Prior field studies had found that intelligence moderated the validity of two non-cognitive tests that had been developed to predict the job performance of Navy enlisted men. The first test was an attempt to measure persistence, and the second test was a purported measure of passive-aggressive character structure called the Insolence Scale. The present study tested the hypothesis that task difficulty was the basis for the field study results. From 70 to 140 Navy enlisted men completed three tasks, each of which was varied in task difficulty. Results did not support the hypothesis concerning task difficulty. However, they did yield significant interactions between intelligence, the two tests, and aspects of task performance. The findings then parallel in a lab setting those of the original field studies. Internal analysis suggested that task motivation, rather than task difficulty, may be the basis for the interactions between the persistence test and performance. (Author)

COMPUTER PERSONNEL SELECTION AND CRITERION DEVELOPMENT: III. THE COMPUTER POSITION PROFILE.
Technical rept.
Joseph W. Rigney, Raymond M. Berger, and Robert C. Wilson. Nov 67. 43p Rept no. TR-53
Contract: Nonr-228 (22)
See also AD-636 988.

Descriptors: (*Computer personnel. Selection). (*Programming (Computers). *Job analysis). Programmers. Psychometrics. Factor analysis. Analysis. Standards.

The Computer Position Profile (CPP), was developed as a means of describing and analyzing the important dimensions of computer programmer and analysts positions. The CPP grew out of the job analysis phase of a long range research program concerned with computer personnel selection and evaluation. As the result of a Q-factor analysis of 150 computer positions in a variety of computer installations, common job factors or dimensions were found and interpreted. The dimensions were interpreted on the basis of the kinds of positions defining each dimension and the tasks most often performed in these positions. A scoring key was constructed for each dimension using the 10 highest-weighted tasks and 10 lowest-weighted tasks in the analysis as positive and negative weights, respectively. The original 150 positions were rescored with these keys. Congruence coefficients between the dimension scores and the original factor loadings were quite high, indicating that the scoring keys based on 20 items will retain the same dimensional structure. C-score norms were then developed for converting the scores to C-scores on a profile sheet. An application was made of the CPP on a group of computer personnel in a large military systems programming organization. The results of this application of the CPP were consistent with the type of programming activities carried on by the three broad job categories: Systems Analyst, Senior Programmer and Programmer. The CPP is recommended as an economical procedure for measuring some of the dimensions of computer personnel positions for purposes of job description, personnel assignment, and training evaluation. NEW TECHNIQUES IN TASK ANALYSIS.
Research memo.,
Joe Silverman. Nov 67, 27p Rept no. NPRA-SRM-68-12

Descriptors: (*Job analysis, Naval personnel), Classification, Numerical analysis, Personnel management, Applied psychology, Learning, Performance (Human).

The research is directed toward the investigation of recent developments in techniques of task analysis. Because of methodological problems associated with the development of training curricula, the analysis of man-machine systems, and occupational analysis, it has been proposed that a task taxonomy be developed. Such a taxonomy would indicate the inherent similarities between tasks, independent of their environment, and pave the way for improvements in training, billet structure developments, and improved manpower utilization. There have been numerous attempts at developing task taxonomies--both quantitative and qualitative. At present, the results of these efforts have not been comprehensive enough, nor suitable for use throughout the Navy. Because of recent developments in other sciences, a small effort was devoted to investigation of the possible application of these new techniques to personnel systems problems in the Navy. Problems of task classification can be approached more systematically through methods of numerical taxonomy than through traditional techniques. Numerical taxonomy places the procedures of task comparison and classification on an operational and quantitative basis. This makes it possible for the Navy to objectively and precisely evaluate its billet and rating structure. Since this research was initiated a short time ago, with a modest budget, the primary effort has been devoted to an investigation of the state-of-the-art. As a result of this initial inquiry, it is concluded that the application of techniques of numerical taxonomy to problems of task analysis is warranted because of its usefulness in helping to solve problems relating to the Navy's personnel systems. THE SAMOA METHOD OF DETERMINING TECHNICAL, ORGANIZATIONAL, AND COMMUNICATIONAL DIMENSIONS OF TASK CLUSTERS.
Technical bull.,
Malcolm J. Carr. Nov 67, 43p Rept no. NPRA-STB-68-5

Descriptors: (*Naval personnel, Classification), (*Job analysis, Computer programs), Questionnaires, Standardization, Personnel management, Leadership.
Identifiers: (*Multidimensional occupational analysis).

The report describes a pilot study of a research method for collecting and analyzing occupational information to be used as a major input for the development of an occupational classification structure suitable for the next decade. This approach is termed the 'SAMOA' method (Systematic Approach to Multidimensional Occupational Analysis). The pilot study demonstrates the technical feasibility of the method for determining current work requirements. The rationale upon which the research was based is that (a) the enlisted occupational classification structure must be based upon valid work requirements; (b) current methods for determining work requirements on a large scale are too slow, too subjective, and limited primarily to the technical dimensions of work; and, therefore, (c) development of improved procedures for determining work requirements is a necessity. The SAMOA method consists of two major phases: (1) Specification of specialty areas by means of a computerized clustering program which identifies relatively homogeneous work groups on the basis of similarity of task patterns; and (2) stratifying such groups (clusters) on the basis of Technical, Organizational, and Communicational variables by means of a set of computerized procedures. Indices of these variables form the basis for cluster profiles which constitute the primary input for an occupational classification structure. (Author)

A STANDARDIZED TASK FORMAT FOR PERSONNEL REQUIREMENTS INFORMATION SYSTEM METHODOLOGY (PRISM).

Preliminary rept.
Gordon M. Campbell. Mar 68. 44p Rept no. NPRA-SRM-68-17

Descriptors: (*Personnel management, Data processing systems), Naval personnel, Human engineering, Man-machine systems, Military requirements, Job analysis, Information retrieval, Manpower.
Identifiers: *Personnel requirements information system methodology.

The report documents the development of a standardized task format designed to include all of the detailed information necessary for the development, analysis, and utilization of complete Navy personnel manning and training requirements information. An information structure developed at the Aerospace Medical Research Laboratories (AMRL) was utilized as a focal point for this phase of research. The AMRL task format was modified to make it more responsive to Navy requirements. (Author)

PREDICTING THE ACADEMIC PERFORMANCE OF NAVY HOSPITAL CORPSMEN.
Laverne C. Johnson, Jo Ann Pollard, and John A. Plag. 1967. 13p Rept no. 67-29

Descriptors: (*Medical personnel, Selection), Naval training, Psychometrics, Naval personnel, Classification, Mathematical prediction, Correlation techniques.

The study served as a pilot investigation of the validity of cognitive and non-cognitive variables for predicting academic achievement among Navy Hospital Corps School students. For a sample of 126 corpsmen, who were considered to be representative of 2500 students attending Corps School, San Diego, between June and December 1966, three variables were identified as being uniquely predictive of academic performance. Age, level of civilian education, and General Classification Test score were found to yield a multiple correlation of .65 with the criterion. This validity represents a substantial improvement over the current selection standard which utilizes only cognitive measures of ability. Scores on the Cornell Medical Index and MMPI were not significantly related to course average. (Author)

MEDICAL COST REPORTING: AN ANALYSIS.
Final rept.
Joseph L. Taylor. Dec 67. 45p Rept no. WRM-68-11

Descriptors: (*Military medicine, Costs), Armed forces budgets, Naval personnel, Medical personnel, Training, Hospitals, Medical equipment.

The purpose of this report is to identify and evaluate the problem areas associated with the determination of medical costs as incurred by the Department of the Navy for its military personnel. To establish a valid medical cost, individual training cost studies should be completed for HM's, DT's, Medical Corps, Dental Corps, Nurse Corps, Medical Service Corps, and the Chaplain Corps. Currently ten management bureaus are involved with the distribution of funds for Naval Medical Activities. The Bureau of Medicine and Surgery funds a portion of the complete medical budget, and it is this figure which is used in the computation of a per man per year medical cost. A close examination of the current medical accounting system should be undertaken to determine the economic feasibility of establishing one central medical cost

reporting agency. This would provide a complete cost of medical services which could then be combined with the training costs and prorated on a per man per year basis to arrive at a more valid annual cost. Until this has been accomplished, it is recommended that the medical cost as currently reported by the Bureau of Medicine and Surgery be utilized. (Author)

Joseph E. Morsh, Robert W. Nall, and Harry M. Kudrick. Feb 68. 454p Rept no. PRL-TR-68-1-Vol-1
See also Volume 2, AD-671 107.

Descriptors: (*Medical personnel, *Job analysis), Classification, Air force personnel, Air force training, Distribution.
Identifiers: Computer printouts.

A job inventory covering four specialties in the Preventive Medicine Career Ladder, and consisting of 275 tasks grouped under 16 duty categories, was administered to 381 airmen in 14 major air commands. Incumbents of all skill levels completed a background information section and rated on a 7-point scale relative time spent on tasks. The airmen also indicated on a 7-point scale amount of work experience on each task compared with other tasks performed. Job descriptions are presented for 32 groups selected according to background information variables. Included are 8 specialty groups, 10 groups with differing lengths of military service, 6 groups with differing job interests, 2 groups differing in directed duty assignment, 2 groups defined according to assignment inside or outside CONUS, 2 groups having had specific technical courses, and 2 groups without these courses. Job descriptions are also presented for the Preventive Medicine Career Ladder total sample and for 17 significant job types identified by the automated job clustering program. A group overlap matrix shows the similarity of groups in terms of time spent on tasks. Summary tables indicate the percentage of members in each group who perform each task. Group difference descriptions are given for selected groups. Distributions of background variables for the total sample and for the 32 specialty groups are also shown. (Author)

DEVELOPMENT, SELECTION, AND VALIDATION OF FACTORS FOR THE EVALUATION OF AIRMAN JOBS.
Joe T. Hazel. Aug 67. 75p Rept. no. PRL-TR-67-14

Descriptors: (*Air force personnel, *Job analysis), Factor analysis, Selection, Regression analysis, Wages, Reliability.
Identifiers: Evaluation.

The purpose of the study was to develop, select, and validate efficient and reliable sets of factors and weights for use in evaluating airman jobs. A representative sample of 200 incumbent-prepared airman job descriptions served as the criterion sample evaluated by senior NCOs, lieutenants, captains, and field-grade officers with respect to merited grade, merited pay, and 15 job requirement factors designed specifically for airman jobs. Various combinations of 37 predictor variables, including the 15 factors, were considered in 1,296 regression analyses (480 reported) made to derive and validate optimally weighted grade and pay policy equations. The grade policy equation, which involved eight variables, accurately predicted the grades awarded jobs in the criterion sample by the raters. The pay policy equation, which consisted of the same eight variables and one other, also accurately predicted raters' judgments of pay. Subsequent analyses with weights developed and cross-applied in 100-job subsamples indicated that both policy equations were very stable. Comparison of the overall-group grade policy equation with grade policy equations developed for each of the four rater groups which provided criterion and factor ratings revealed no important differences. The predictive efficiency of the policy equations and of all predictor combinations investigated was about the same for the four rater groups. (Author)

A PROJECTIVE TECHNIQUE FOR THE MEASUREMENT OF PATIENT ATTITUDES ON HOSPITAL WARDS.
Final rept.
Paul S. Francis, and Daniel J. Peterman. Jul 68. 40p Rept. no. HRB-4143.11 (Task 5)-F-31
Contract N00014-67-C-0501

Descriptors: (*Medical personnel, Training), (*Projective techniques, Attitudes), Psychometrics, Attitudes, Questionnaires, Responses, Research program administration, Test construction (Psychology), Nurses, Medical technicians.
Identifiers: *Patients.

A projective technique to be used in conjunction with several other assessment devices in evaluating the Ward Manager program in Naval Hospitals was developed. The sentence completion method was selected as the technique of choice. The semantic differential scale was included as a check on the validity of the scoring system. The techniques were assembled and administered as a pilot-test effort to 75 patients, 61 of whom produced scorable protocols. No major problems were encountered in the pilot testing. The correlations of the two instruments used in this pilot testing seem to relate to one another to acceptable degree. This not only supports the validity of the sentence completion scale, but it also extends the use of the total technique. (Author)

JOB RESTRUCTURING WITHIN THE NAVY
HOSPITAL CORPSMAN RATING: A FEASIBILITY STUDY.**

Final rept.,
Robert T. Root, Paul S. Francis, and Thomas E. Ray, Jul 68, 64p* Rept no. HRB-4143.11 (Task 6)-F-31
Contract N00014-67-C-0501.

Descriptors: (*Personnel management; Hospitals), (*Job analysis, Naval personnel), Manpower studies, Achievement tests, Performance (Human), Intelligence tests, Correlation techniques, Labor, Distribution, Selection, Specifications, Classification, Feasibility studies, Collecting methods, Data processing systems, Sampling, Identification, Retention.
Identifiers: Job restructuring, *Hospital corpsmen.

Two different but converging avenues of study were used in the investigation of lower mental level personnel, i.e., personnel who scored in the 10th to 30th percentiles on the armed services qualification test. One studied the relative performance of lower mental level personnel presently in the hospital corps. The other was directed toward the identification of tasks and task clusters for possible job restructuring to permit the effective utilization of lower mental level personnel. (Author)

QUANTITATIVE DIFFERENTIATION ON
JOBS,**
Joseph E. Morsh, 1968, 2p
Availability: Pub. in Proceedings, 76th Annual Convention, APA, p639-640 1968.

Descriptors: (*Job analysis, Statistical processes), Questionnaires, Sampling, Statistical data, Classification, Programming (Computers), Identification, Inventory, Manpower studies, Personnel management, Research program administration.
Identifiers: Comparative studies.

The composite group job description can be derived for any group that can be defined in terms of background variables. Such consolidated group job descriptions are routinely generated for skill-level groups and for groups designated by length of service. The computer printout of the group job description identifies the career ladder surveyed and also shows sample size, number of tasks and duties in the inventory, and the number of members in the group described. The job description proper shows the percentage of group members performing each task, the average percentage of work time spent by members of the group who perform the task, and the average percentage of work time on each task distributed across all group members. The tasks are arranged in descending order of these latter values. (Author)

Descriptors: (*Medical personnel, Training), (*Programmed instruction, Naval personnel), Hospitals, Job analysis, Retention, Questionnaires, Performance (Human), Statistical distributions, Responses, Instructors, Nurses, Attitudes, Classification, Tables.
Identifiers: Evaluation, Curricula, Hospital corps schools.

Two major areas were investigated: (1) The nature of the present curricula at the two schools and (2) the nature of the job requirements expected of newly graduated Corpsmen at their first duty station. The development and construction of four instruments and the analysis and description of the present curriculum was accomplished. The curriculum analysis consisted of a topic by topic analysis of the individual Corps school curricula and a summarization of major discrepancies. The survey was an integral part of the retention examination and was designed to determine where student and graduate Corpsmen gained retention item information. The task scale was composed of a list of the tasks that comprised the job which the Junior Corpsman performed at his first duty station. The questionnaires asked for responses primarily of a demographic and attitudinal nature. (Author)

TOWARD UNDERSTANDING THE ROLE OF
TASKS IN BEHAVIORAL RESEARCH,**
J. Richard Hackman, Aug 68, 59p AFOSR-68-1678
Grant AF-AFOSR-1600-68

Descriptors: (*Job analysis, Psychometrics), (*Behavior, Correlation techniques), Scientific research, Performance (Human), Feasibility studies, Standards, Test construction (Psychology), Reliability, Stress (Psychology).
Identifiers: Task evaluation.

This paper attempts to lay the ground work for furthering our understanding of the differences among tasks and the ways in which tasks influence behavior. Three general 'problem areas' are reviewed and evaluated in the paper: (a) problems in defining the concept 'task'-i.e., what are the components and characteristics of an adequate task definition; (b) problems relevant to the description of tasks-i.e., what are the most useful and appropriate bases for making task descriptions and comparisons; and (c) problems relevant to understanding task effects-i.e., how do task factors

make differences in the ways people think and act. After evaluating several issues relevant to the problems of task definition and description, one working definition of the concept is proposed, and one general approach to task description is suggested as likely to be most useful in understanding the behavioral impact of tasks. Finally, a framework proposed which outlines the diversity of effects which may be attributable to task factors in a performance situation, and suggests how these effects may be conceptualized and related. Descriptors: (*Medical personnel, *Training), (*Programmed instruction, Computers), Naval personnel, Military requirements, Specifications, Design, Education, Dental personnel, Nurses, Medical technicians, Costs.
Identifiers: Computer aided instruction.

A research and development activity to introduce new and improved education and training technology into Bureau of Medicine and Surgery training is recommended. The activity, called a Design and Verification Unit, would be administered by the Education and Training Sciences Department. Initial research and development are centered on the application of multimedia instructional packages: self-contained learning materials and their associated devices, designed using programmed learning principles. A second stage of activities for the unit introduces research and development in the use of computers for computer-managed training and computer-assisted learning. Suggested schedules, activities, and milestones are presented. (Author)

AUTOMATION FOR THE HOSPITAL OF TOMORROW.
Thesis,
William Stanislaus Beck. 1 Apr 68, 68p Rept no. AMD-TR-68-3

Descriptors: (*Hospitals, Automation), Data processing systems, Information retrieval, Programming (Computers), Management engineering, Medical personnel, Diagnosis, Computer storage devices, Computer personnel, Advanced planning.

With the increasing emphasis on automation and shortage of skilled personnel within the medical service of the United States Air Force, the necessity for developing a mechanized system to assist in hospital and medical management became apparent. As Project Engineer for developing a medical information system by computer operation, the author has researched literature, visited hospitals with computers, talked with computer hardware salesmen, and attended meetings and seminars on computer usage. This paper is an attempt to familiarize others interested in computer application for hospitals and the medical fields with my research. (Author)

A MODEL OF PHYSICIAN PRICING,
Joseph P. Newhouse. Jan 69, 17p Rept no. P-4011

Descriptors: (*Medicine, Costs), (*Costs, Mathematical models), Medical personnel, Economics, Tables.
Identifiers: Medical services, Physicians, Demand (Economics), Supply (Economics), Monopoly, Competition.

It is not clear whether the market for physician services can be better characterized as monopolistic or competitive. This paper attempts to shed some light upon that question. The tests are based upon inferences from two alternative models of the market for physician services. The first model is that of a monopoly, and is the model which the foregoing discussion of the market leads us to formulate. In the second model price is set by the intersection of supply and demand curves, as in a competitive market. (Author)

TECHNIQUES FOR DEVELOPING SYSTEMS TO FIT MANPOWER RESOURCES.
Final rept.,
Melvin T. Snyder, and William B. Askren. Oct 68, 20p AFHRL-TK-68-12
Presented at the Army Human Factors Research and Development Conference (14th).

Descriptors: (*Personnel management, Systems engineering), Military requirements, Manpower, Military personnel, Logistics, Specifications, Data processing systems, Queueing theory.
Identifiers: Tradeoffs.

The report discusses four related processes for developing systems within manning and skills constraints. The point is made that the services are beginning to feel the need to exert some measure of control over system design where human resources are involved. The report covers: (1) Research to prove that certain human resources data, such as manning and skills data, when used as design constraints along with other constraints does affect system design; (2) techniques by which to match or balance through tradeoff practices the hardware, the human and other system support or logistic functions in order to get a best mix depending on the real world operational goals; (3) a new specification by which personnel requirements are stated in terms of system requirements, for integrating more fully the human requirements with the system engineering processes; (4) a newly developed computer based data handling system for human resources data in the conception, development, test and operation of systems. The new data handling system is also an integrator of human and hardware data within and across systems, and a mechanism for comparing field performance data with early design data. (Author)

JOB INVENTORY INFORMATION: TASK AND SCALE RELIABILITIES AND SCALE INTER-RELATIONSHIPS.

Rept. for Mar 62-Oct 64,
John R. Cragun, and Ernest J. McCormick. Nov
67. 55p PRL-TR-67-15
Contract AF 41 (609)-1604

Descriptors: (*Job analysis, Reliability), Inventory, Scale, Regression analysis, Correlation techniques, Management planning, Reaction (Psychology), Interactions, Questionnaires, Tables.
Identifiers: Rating scales, Comparison.

Officer job incumbents in three utilization fields were surveyed with job inventories to determine the reliability of task information and the reliability of five different rating scales used to rate tasks performed, the relationships between the five rating scales, and incumbent reactions to the inventories and the scales. Inventories were administered twice to the same job incumbents at a four-month interval. Each inventory included one of five rating scales on the basis of which job incumbents reported additional information about the tasks performed. These scales were time-spent, importance, part-of-the-position, difficulty, and method-of-learning. Some incumbents received the same scale for the second administration, and others received a different scale. Questions pertaining to the adequacy of the inventory and the rating scale were also answered. Task, duty, and overall reliabilities were obtained on both the inventories and the scales, and correlations were computed for various scale combinations. A regression analysis was used to identify variance components of the part-of-the-position scale. Several major conclusions were drawn on the basis of the results of these procedures. (Author)

TOWARD A THEORY OF NON-PROFIT INSTITUTIONS: AN ECONOMIC MODEL OF A HOSPITAL.

Joseph P. Newhouse. Jan 69. 23p Rept no. P-4022

Descriptors: (*Hospitals, Mathematical models), Theory, Economics, Costs, Efficiency, Manage-

ment engineering, Optimization, Cost effectiveness, Decision making, Employment, Medical personnel, Quality control.
Identifiers: Nonprofit institutions.

A simple model of a hospital is developed, and its implications are considered. An attempt is made to justify the realism of the model, although it cannot be entirely realistic. To develop the model the assumption is made that hospital expenses are financed by the patient and not by a third party. Thus the model may prove applicable to other nonprofit institutions where third party payments are not important, such as colleges and universities, the performing arts, and museums. (Author)

Knowledge about the economics of medical care is scanty, and it is not clear whether the market for physician services can be better characterized as monopolistic or competitive. This paper attempts to shed some light upon that question. (Author)

CLASSIFICATION OF NAVY HOSPITAL CORPS STUDENTS BY DISCRIMINANT ANALYSES.

Medical research interim rept.,

Martin K. Chen, and Adele Wood. 1968. 9p

NAVJED-M4303.05-0001D-1

Availability: Pub. in Military Medicine, v133 n12 p997-1003 Dec 68.

Descriptors: (*Students, Classification), (*Military medicine, Naval training), Attrition, Naval research, Feasibility studies, Programming (Computers), Predictions, Performance (Human), Statistical analysis.

Identifiers: Navy Hospital Corps, Computer analysis, Discriminant analysis.

The purpose of the study is to test the utility of certain ability, interest and demographic variables in differentiating graduates and nongraduates of the Corps school in Great Lakes. This is the first of a series of studies designed, ultimately, to provide the necessary input for a computer program by which candidates may be selected for the training program according to the probabilities of their predicted success or failure to complete the program. A LINEAR PROGRAMMING APPROACH TO POSITION-SALARY EVALUATION IN SCHOOL PERSONNEL ADMINISTRATION.

James E. Bruno. Feb 69. 29p* Rept no. P-4039

Descriptors: (*Education, Job analysis), (*Job analysis, Linear programming), Costs, Professional personnel, Instructors.

How much should a person with a given set of qualifications be paid so that his salary is consistent with other salaries in an organization. The purpose of this document is to explore the possible utilization of linear programming techniques for answering the above question in job-salary evaluation. Specifically, a linear programming model is used to analyze a hierarchical salary structure in a school district. The model is used to determine the relative importance of each of the compensable elements of each function (position) in a school district. In addition, monetary equivalents to these elements are derived from the model in order to develop a consistent scale of compensation within a school district. The proposed type of job-salary evaluation scheme might have wide application in the Air Force as well as civilian sector, since it could be of important use in determining discrepancies or in determining those positions in the Air Force which seem 'out of line' in terms of salary or grade classification. The development of utility objective functions, so factors of a job which are considered crucial, receive higher relative weights would tend to increase the flexibility of the salary schedule in responding to the changing needs and demands of the organization. A VOICE-RADIO METHOD FOR COLLECTING HUMAN FACTORS DATA.

Technical rept. Sep 67-May 68,

W. B. Askren, N. F. Schwartz, S. M. Bower, and

M. D. Schmid. Jan 69. 34p Rept no. AFHRL-TR-

68-10

Descriptors: (*Job analysis, Collecting methods), (*Data processing systems, Communication systems), Radio communication systems, Voice communication systems, Portable, Performance (Human), Maintenance personnel, Feasibility studies.

Available methods for collecting human factors data rely heavily on observations, interviews, and questionnaires. A need exists for other methods. The feasibility of using two-way voice-radio for this purpose was studied. The data-collection methodology consisted of a human factors analyst talking from a radio base station with technicians wearing portable radio units while they worked on jobs dispersed over an area. Verbal communication probed for information on equipment problems, procedural problems, delays, and potential hazards. The concept of using radio equipment to collect human factors data was tested, using technicians performing flight-line maintenance. Data collected by radio were compared with data collected by questionnaire. It was concluded that voice-radio is not only a feasible means of collecting human factors data in the field, but has certain advantages over questionnaires in determining hardware problems and amplifying the data-collection capability of the human factors analyst. THE DEMAND FOR MEDICAL EDUCATION - A STUDY OF MEDICAL SCHOOL APPLICANT BEHAVIOR.
Doctoral thesis.
Frank A. Sloan. Apr 69, 41p Rept no. P-4075

Descriptors: (*Medicine, Education), (*Students, Behavior), Statistical data, Manpower studies, Attitudes, Motivation, Analysis, Economics, Costs, Wages, Theses.
Identifiers: *Medical education, Applicants. Demand (Economics).

A primary concern of the study is the policy instruments which may be used to affect production levels of the medical education system. It has been suggested that one possible way to stimulate medical school expansion is through policies which act on demand for medical education. Two series, total applicants and applicants to medical schools with superior college records, were analyzed. (Author)

INNOVATIONS AND EXPERIMENTS IN USES OF HEALTH MANPOWER--A STUDY OF SELECTED PROGRAMS AND PROBLEMS IN THE UNITED KINGDOM AND THE SOVIET UNION.
Edward H. Forgotson, and Judith H. Forgotson.
Apr 69, 23p Rept no. P-4074

Descriptors: (*Manpower studies, Public health), (*Public health, *Management planning), Research program administration, Medical technicians, Training, Problem solving, Classification, Effectiveness, Correlation techniques, United States, Great Britain, USSR.
Identifiers: Feldshers, Comparison.

Neither the United Kingdom nor the Soviet Union provide programmatic or regulatory models that could be applied directly to solve the problems of developing and using intermediate health professionals and high-level medical auxiliaries in the United States. Nevertheless, a study of selected elements of their medical-care systems does provide guidance for regulatory revision in terms of the need for flexibility, and institutional focus for regulation, the active cooperation of the medical and nursing professions in developing and administering the regulations, a non-hierarchical relation between nurses and other high-level medical auxiliaries, and the managerial role and responsibility of the physician. Furthermore, such a study provides a certain perspective with which developments in the United States should be viewed. Neither country studied offered any experience in experimental uses of manpower to solve current or evolving problems, and in neither country was there any mention of manpower research to define or redefine appropriate tasks for various manpower categories based on the skill and competence of the members of those categories. LIFETIME EARNINGS AND THE PHYSICIAN'S CHOICE OF SPECIALTY.
Frank A. Sloan. May 69, 28p Rept no. P-4068

Descriptors: (*Medical personnel, Wages), (*Wages, Decision making), Job analysis, Statistical analysis, Mathematical models.

The objective of the study is to determine whether lifetime earnings in various physician specialties influence choice of field. If income does affect these decisions, what is the magnitude of the supply response. In Section II estimates of lifetime earnings are described. As is seen in Section III, specialty-general practice income differentials do not explain why virtually all medical school graduates enter residency programs in a physician spe-

cialty. Although earnings may not explain the decision to specialize, choices among particular specialties may reflect inter-specialty income differences. A model which measures the supply response to lifetime earnings is presented in Section IV. Although the sign of the lifetime earnings coefficient is significant in most regression equations at the one per cent level, the supply response to income is small. In Section V the lifetime earnings are replaced by a simpler measure of income, median earnings by specialty. The estimated response elasticities are virtually the same as before. Possible deficiencies in the model are examined in Section VI. Section VII contains concluding remarks. (Author)

SIMPLIFIED APPROACH TO A MANPOWER MANAGEMENT MODEL.
Duncan L. Dieterly. Dec 68, 20p AFHRL-TR-68-116

Descriptors: (*Personnel management, Air Force research), Models (Simulations), Theory, Manpower, Systems engineering, Classification, Job analysis, Statistical processes, Optimization.
Identifiers: Manpower management models.

A manpower management model was designed to reflect four factors of concern to personnel managers: procurement, training, reassignment, and retention. Within the framework of this model, seven basic indexes were developed to yield simple, reliable descriptive data by which a manpower structure can be assessed at given points in time. These indexes permit evaluation of the consequences of past policies and anticipation of needs for future policy change. By means of the simple ratio indexes, specific manpower problem areas can be identified, and force strength can be compared across seven dimensions (loss, retention, gain, flow, transfer, utilization, and stability) and at various levels within an organization. DEVELOPMENT OF A TAXONOMY OF HUMAN PERFORMANCE: A HEURISTIC MODEL FOR THE DEVELOPMENT OF CLASSIFICATION SYSTEMS.
Technical rept.,
Edwin A. Fleishman. Mar 69, 127p* Rept no. AIR-726-3/69-TR-4 AFOSR-1365TR
Contract F44620-67-C-0116, ARPA Order-1032

Descriptors: (*Performance (Human), Classification), Behavior, Scientific research, Models (Simulations), Reaction (Psychology), Decision making, Problem solving, Job analysis, Psychophysiology, Performance tests, Environment, Interactions, Medical examination, Personality, Psychometrics.
Identifiers: Taxonomy.

Many workers in the behavioral sciences and human factors technologies have expressed the need for better classification systems to understand and apply the vast amounts of data acquired about man for the performance of jobs and tasks. Reviews of existing classification systems, reported in previous technical reports in this series, disclosed more expressions of needs for these systems than actual systems in existence. Therefore, as a means for more systematically exploring the issues and options with respect to human performance classification, a heuristic model is presented. With this as a framework the uses of human classification performance systems, their content, and the methods available for their development are each discussed in turn. The report concludes with some recommendations about what the author believes is required if significant progress is to be made in the further development of human performance classification systems. A STUDY OF A CIRCULAR DENTAL CLINIC EMPLOYING ADVANCED PRACTICE METHODS.
Research progress rept.,
Lloyd M. Armstrong; Barry E. Sharrow, Paul O. Walker, Bobby J. Priest, and Gordon H. Rovelstad. 2 Jun 69, 19p Rept no. NDRI-PR-69-06

Descriptors: (*Dentistry, Medical research), Therapy, Dental personnel, Sterilization, Medical equipment, Design, Performance (Human).
Identifiers: Dental clinics.

A clinical research study was initiated to determine the efficiency of an Experimental Dental Clinic. Methods of practice were employed that met the following basic requirements: (1) surgically clean environment; (2) dentist and assistant teamwork; (3) versatile patient treatment, and (4) reduced stress and strain. A circular five-chair operating suite was developed to support the sharing of a rotating dental assistant. A compact dental unit was developed to replace the conventional dental unit. All instruments were sterilized in individual packs and delivered to the operatories as needed. The clinic was staffed with five dentists and seven auxiliaries. A conventional five-chair Control Clinic was staffed with five dentists and five auxiliaries. Fifteen dental officers rotated through both clinics. The number of surfaces restored and the actual time spent in placing the restorations was recorded. In the Experimental Clinic a total of 5,930 surfaces required an average of 9.8 minutes productive time each, compared to 5,582 surfaces in the Control Clinic that required 12.9 minutes per surface. This represents a 32 per cent increase in surfaces restored in the Experimental Clinic with the addition of one dental auxiliary to serve as a rotating dental assistant and one to sterilize the instrument packs. THE JOB DIMENSIONS OF 'WORKER ORIENTED' JOB VARIABLES AND OF THEIR ATTRIBUTE PROFILES AS BASED ON DATA FROM THE POSITION ANALYSIS QUESTIONNAIRE.
Technical rept.
P. R. Jeanneret, and Ernest J. McCormick. Jun 69, 123p Rept. no. TR-2
Contract Nonr-1100 (28)

Descriptors: (*Job analysis, Classification), Statistical analysis, Identification, Personnel management, Questionnaires.
Identifiers: PAQ (Position Analysis Questionnaires), Position analysis questionnaires.

The study was designed to investigate the hypothesis that there is some structure underlying the domain of human work, and that this structure can be defined in terms of one or more sets of job dimensions. The basic approach to the derivation of these dimensions involved the characterization of job activities and work situations in behavioral of 'worker-oriented' terms using a job analysis instrument known as the Position Analysis Questionnaire (PAQ). Two major data sources were developed and structured in terms of the behavioral job elements comprising the PAQ. One set of data consisted of 536 jobs analyzed with the PAQ, while the second set of data consisted of the ratings of the relevance of 67 different human attributes to each of the job activities and work situations described in the PAQ. Three different multivariate procedures were used to construct several sets of job dimensions. There were noticeable similarities between all of the dimensions, and it was concluded that there is a certain structure to the world of work that can be identified. Implications for the use of such dimensions, particularly in the synthetic validity context, are noted. (Author)

THE DEVELOPMENT AND BACKGROUND OF THE POSITION ANALYSIS QUESTIONNAIRE.
Technical rept.
Ernest J. McCormick, Paul R. Jeanneret, and Robert C. Mecham. Jun 69. 66p Rept no. TR-5
Contract Nonr-1100 (28)

Descriptors: (*Job analysis, *Questionnaires), Psychometrics, Performance (Human).
Identifiers: PAQ (Position Analysis Questionnaires), Position analysis questionnaires.

The report deals with the background and the development of the Position Analysis Questionnaire (PAQ), which was used as the basic job analysis instrument in the research program. The PAQ (Form A) used in the study includes 189 job elements of an essentially "worker-oriented" nature, these elements generally characterizing "work activities of a behavioral nature (or that have strong implications in behavioral terms), and elements that characterize certain aspects of the context within which human work is performed. The job elements of the PAQ have been used as the basis for deriving various sets of job dimensions, and for studies of an exploratory nature that deal with the potential use of the PAQ as the basis for developing synthetically-derived job attribute requirements, and for job evaluation purposes. The report describes the development of the PAQ, Form A, from earlier job analysis instruments, and the more recent development of a modified version of the PAQ, Form B. (Author)

A STUDY OF JOB CHARACTERISTICS AND JOB DIMENSIONS AS BASED ON THE POSITION ANALYSIS QUESTIONNAIRE.
Rept. no. 6 (Final).
Ernest J. McCormick, Paul R. Jeanneret, and Robert C. Mecham. Jun 69, 26p
Contract Nonr-1100 (28)

Descriptors: (*Job analysis, Classification), Questionnaires, Statistical analysis, Identification.
Identifiers: PAQ (Position Analysis Questionnaires), Position analysis questionnaires.

It was hypothesized that, across the spectrum of jobs, there is some underlying 'structure' of human work in terms of the human behaviors involved. The project was directed toward the identification of behavioral job elements and of their organization into job dimensions, and the exploration of certain possible practical applications of job data based on such job elements or dimensions. The project involved the development of a job analysis instrument called the Position Analysis Questionnaire (PAQ) that included 189 job elements of a worker-oriented nature. Principal components analysis procedures were used in the analyses of two types of data based on the PAQ. One set consisted of job data for 536 jobs that were analyzed with the PAQ. The other consisted of 'attribute profiles' of the job elements: (These consisted of median ratings of the relevance of 67 human attributes to each job element). (Author)

TASK EXTENSION AND RESPONSIBILITY FOR RESOURCE DEPLOYMENT.
Working paper.
E. R. F. W. Crossman. Mar 69, 15p Rept no. HFT-69-3
Contract N00014-67-A-0114

Descriptors: (*Management engineering, *Job analysis), Statistical analysis, Measurement, Personnel management, Time studies, Management control systems, Costs, Decision making, Supervision, Distribution theory.
Identifiers: *Resource allocations, Range (Extremes).

Methodological deficiencies revealed in field trials of Jaques' Time-span of Discretion instrument, point to a need to include resource-deployment as a second dimension in measuring level of organizational work. This can be achieved by estimating resources allocated by the superior to performance of each task for which task-extension is

measured. Unitary models and estimators of resource-deployment span and capacity are developed for proposed use in further field studies. These promise better statistical properties than time-span of discretion. It is suggested that mean resource-deployment rate may be estimated as the aggregate of five distinct types of resource rate, viz., own time, workforce time, rate of overhead service usage, rate of raw material usage, cost of capital equipment, cost of maintaining inventory. Report on Communication, Cooperation, and Negotiation in Culturally Heterogeneous Groups. See also Technical rept. no. 77, AD-692 408.

Descriptors: (*Culture, Programmed instruction), (*Group dynamics, Central America), Medical personnel, Interactions, Performance (Human), Effectiveness, Adjustment (Psychology), Environment, Correlation techniques, Honduras, Guatemala, Statistical processes.
Identifiers: Culture assimilators, Crossculture (Sociology), Volunteers, Self instruction, Comparison.

The study compared the performance of volunteer medical teams who received a programmed culture assimilator test with teams who did not receive the assimilator. All team members, all citizens of the United States, worked for three-week periods in Honduras and Guatemala and were rated on their success in conducting clinics and managing community development projects. The effect of culture training upon productivity was accentuated in teams in which the majority of members had worked in Central America before. Assimilator training also had greatest effect for teams working in villages in which teams experienced relatively little difficulty in their relations with the community. (Author)

Contract Nonr-1834 (36)

Report on Communication, Cooperation, and Negotiation in Culturally Heterogeneous Groups. See also Technical rept. no. 75, AD-692 407.

Descriptors: (*Nurses, Performance (Human)), Effectiveness, Behavior, Supervision, Leadership, Motivation, Medical personnel.

Many of the results obtained by Nealey and Blood (J. App. Psych. v52, 1968) in a study of nursing supervision in a Veterans Administration Hospital were reinforced in the present study which was carried out in the same setting. In addition, multiple measures of nursing behavior and nursing effectiveness were examined by the multitrait-multimethod approach. Estimates of nurse behavior by the nurses themselves and by their superiors were uncorrelated with each other and with a more objective measure of nurse behavior. Interpretations of multitrait-multimethod results obtained in organizational settings are discussed. The obtained relations among predictors and between predictors and criteria of performance, have implications for the establishment of an effective performance-reward-feedback system by which superiors could motivate subordinates. Report on Further experiences in the use of optical readers.
Availability: Pub, in Work Study, v18 n2 p27-33 Feb 69. No copies furnished.

Descriptors: (*Construction, Job analysis), (*Job analysis, *Time studies), (*Reading machines, Job analysis), Data processing systems, Sampling, Buildings, Optical scanning, Programming (Computers), Great Britain.
Identifiers: Computer aided analysis.

The Building Research Station has been using sampling techniques to obtain detailed information on the labour expended on site allocated to various categories of work. This involves up to 1000 recordings being made daily with each recording containing several pieces of information. To speed up the work of the analysis the Station has been developing the use of special recording forms which can be read directly into an optical reader. The reader transcribes the handmarked forms into punched paper tape suitable for direct presentation to a digital computer. The Station has been using these forms for about two years. After dealing briefly with the practical aspects of the sampling technique this paper concentrates on the snags that occurred when using these forms in the field and how they were overcome, and also describes the type of information obtained from the analysis and explains how this is presented by the computer. CONSTRUCTION AND ADMINISTRATION OF TEN AIR FORCE JOB INVENTORIES.
Clyde C. Mayo. Oct 69, 34p AFHRL-TR-69-27
Contract F41609-68-C-0016

Descriptors: (*Job analysis, Air Force personnel), Personnel management, Inventory, Air Force personnel, Supervisory personnel, Questionnaires, Programming (Computers), Data processing systems, Management planning.
Identifiers: Career ladders, Job inventories.

Ten job inventories were constructed for survey of a number of Air Force career ladders. Background variables designed to assess task-related information were included in each inventory. A replication of a previous study of contributions of technical advisers to inventory construction was related to an earlier finding that airmen at supervisory skill levels provide the best job information. Broad statements to work designed to discriminate between job types on a more global level than task statements were included in eight job inventories. Trial answer sheets designed to be scored by optical scanning devices were administered on two surveys. Inventory constructors predicted job types for all career ladders surveyed. Write-in information from administrative surveys were reviewed, and significant contributions were added to job inventory content. Inventory responses were keypunched and verified in preparation for electronic data processing. (Author)

THREE STUDIES OF JOB INVENTORY PROCEDURES: SELECTING DUTY CATEGORIES, INTERVIEWING, AND SAMPLING.
Clyde C. Mayo. Nov 69, 18p AFHRL-TR-69-32
Contract F41609-68-C-0016

Descriptors: (*Personnel management, Air Force research), (*Job analysis, Inventory), Classification, Sampling, Statistical processes, Standards, Operations research, Organizations, Supervision.
Identifiers: Career ladders, Interviews, Task evaluation, Nonsupervisory tasks.

Three United States Air Force job inventory procedures were studied in depth: categorizing task statements by duties, interviewing technical advisers for job information, and detecting bias in survey samples. Variations in usual grouping of supervisory tasks were found to be occasionally necessary. Depending upon the career ladder surveyed, non-supervisory tasks are related to work section, function, or equipment format. Criteria are suggested for determining the point at which interviews become more productive than publications research. Interviewing evaluated when advisers are chosen according to experience, rank, kind of organization to which assigned, and job type. An analysis of trends in ten survey samples was made. (Author)

A METHOD FOR DETERMINING JOB TYPES FOR LOW APTITUDE AIRMEN.
Clyde C. Mayo. Nov 69, 19p AFHRL-TR-69-35
Contract F41609-68-C-0016

Descriptors: (*Personnel management, Air Force research), (*Job analysis, Aptitude tests), Questionnaires, Statistical data, Reviews, Performance (Human), Standards, Factor analysis, Safety, Supervision, Errors, Air Force training, Identifiers: Marginal personnel, Air Force career ladders.

An opinion survey method for identifying low aptitude job types was developed and used in a study of 11 air Force career ladders. Lists of low aptitude tasks were defined by technical advisers. These tasks were then rated on nine factors by Air Force instructors who also described low aptitude job types and gave their opinion concerning the possibilities for advancement and training of low aptitude personnel. In an evaluation of the research methodology, strengths and weaknesses of the opinion survey method were delineated. The relative ease with which the tasks lists were constructed lent support to the utility of the method. A limitation in the method was recognized in the inability to control for systematic rater bias. (Author)

Descriptors: (*Medical personnel, *Army training), Teaching methods, Training devices, Performance tests, Motivation, Attitudes, Job analysis, Identifiers: *Functional context training.

A study was conducted to determine the effect of integrating the Basic Combat Training (BCT) and Advanced Individual Training (AIT) of the Medical Corpsman (MOS 91A10) for Conscientious Objector personnel. It was expected that the study would serve as a test of the combined BCT/AIT concept of training for broader application in the Army training system. The curriculum for COs was redesigned to provide a continuous MOS-oriented 16-week training sequence. Redesign included introduction of new training techniques, such as TV geared to the rate of learning and arrangement of instructional material in functional context. (Author)

EVALUATION OF A NEW METHOD IN TEACHING MEDICAL MATHEMATICS TO NAVY HOSPITAL CORPS SCHOOL STUDENTS.
Medical research interim rept., Martin K. Chen 1970, 10p
Availability: Pub. in Military Medicine, v135 n2 p122-128 Feb 70.

Descriptors: (*Medicine, Naval training), (*Mathematics, *Teaching methods), Reviews, Performance (Human), Performance tests, Correlation techniques, Identifiers: Comparison, Evaluation, Medical mathematics.

Four companies (classes) of Navy Hospital Corps School students were used as subjects in an experiment designed to compare the effectiveness of a new method with that of the old method in teaching medical mathematics. The new method required mastery of a simple mathematical operation called proportions, while the old method emphasized rule memorization. The data indicated that while there was no significant difference in the effectiveness of the two instructional methods, students taught by the new method required only one hour of practice as compared with three hours for students taught by the old method. OCCUPATIONAL SURVEY OF THE RADIOLOGY CAREER LADDER 903X0.
Technical rept., Andrew T. Garza. Mar 69, 9p AFHRL-TR-69-106
Contracts AF 41 (609)-3049, AF 41 (609)-1982

Descriptors: (*Job analysis, *Medical personnel) (*X rays, Military medicine), Classification, Questionnaires, Programming (Computers), Technicians, Operators (Personnel), Data processing systems, Identifiers: *Career ladders, *Military occupations, Computer analysis, Radiology.

A job inventory covering four specialties in the radiology career ladder, and consisting of 369 tasks grouped under 15 duty categories, was administered to airmen in 16 major air commands. Incumbents of all skill levels completed a background information section and the relative time spent on tasks rated on a 7-point scale. The airmen also indicated on a 7-point scale the source of training for each task performed. Job descriptions derived by electronic computer are presented for four specialty groups, four job-type clusters, eleven significant job types, and for the total sample of the Radiology Career Ladder. Narrative summaries are presented for the clusters and job types identified by the automated job-clustering program. (Author)

THE RELATIVE IMPORTANCE OF JOB FACTORS: A NEW MEASUREMENT APPROACH.
Technical rept., Stanley M. Nealey. May 70, 69p Rept no. TR-1
Contract N00014-67-A-0299-0011

Descriptors: (*Naval vessels (Combatant), Personnel management), (*Job analysis, Statistical processes), Job analysis, Attitudes, Correlation techniques, Factor analysis, Destroyers, Supervisory personnel, Group dynamics, Identifiers: Job satisfaction, Military occupations, Personnel retention, Enlisted men.

The paper reports on a new two-phase measurement technique that permits a direct comparison of the perceived relative importance of economic vs. non-economic factors in a job situation in accounting for personnel retention, the willingness to produce, and job satisfaction. The paired comparison method was used to measure the preferences of enlisted men aboard a U. S. Navy destroyer for seven different job classifications, their supervisors, and seven groups of co-workers. In a second phase of the study, these three job factors were combined, together with various amounts of pay, to form two-factor composites. Multiple correlation was used to predict preferences for these composites from the job factor scale values obtained in phase one. Implications of the method and findings to the formation of personnel policy are considered. (Author)

THE COLLECTION AND ANALYSIS OF HUMAN FACTORS DATA IN TASK ANALYSIS.
Master's thesis, Rodney Paul Kempf. Apr 70, 52p

Descriptors: (*Job analysis, Human engineering), (*Data processing systems, Feasibility studies), Questionnaires, Analysis of variance, Statistical processes, Programming (Computers), Naval research, Theses.

The paper develops a questionnaire to be used in determining the necessity of various human factors to the successful performance of any particular job. Included in the proposed questionnaire are fifty-eight characteristics and a scheme for rating the variables. A program is developed for analyzing the data collected. A two-way analysis of variance by ranks is used to detect significant difference between the characteristics, and, given a difference exists, a method similar to the multiple range test is employed to separate the several characteristics into significance groups, the various groups being ranked on an ordinal scale. PERFORMANCE IN FIVE ARMY JOBS BY MEN AT DIFFERENT APTITUDE (AFQT) LEVELS: I. PURPOSE AND DESIGN OF STUDY.

Technical rept., Robert Vineberg, Elaine N. Taylor, and John S. Caylor. Nov 70, 44p* Rept no. HUMRRO-TR-70-18 Contract DAHC19-70-C-0012

Descriptors: (*Army personnel, Effectiveness), (*Manpower studies, Performance (Human)), Job analysis, Classification, Aptitude tests, Background, Education, Questionnaires, Correlation techniques, Statistical distributions, Reviews. Identifiers: Socioeconomic status, Marginal personnel, *Military occupational specialties, Ethnic groups, Rating scales, Aptitude levels.

To provide information about the performance and characteristics of effective and ineffective marginal personnel in the Army, a study has been made of approximately 1800 men with experience ranging up to 20 years in five MOSs (11E, Armor Crewman; 63C, General Vehicle Repairman; 76Y, Unit and Organizational Supply Specialist; 91B, Medical Specialist; 94B, Cook). The sample included a comparison group of men in the same jobs but coming from the upper (not-marginal) part of the AFQT distribution. Performance was measured by intensive job sample tests, job knowledge tests, and supervisor ratings. Information about background, personal characteristics, and military experiences was obtained through biographical questionnaires, a battery of published and experimental tests, and Army records. The report, the first in a series, describes the rationale, research design, and general chronology of research events in the study. (Author)

THE RELIABILITY OF EXPERT OPINION IN SPECIFYING COURSE CONTENT.
Technical bulletin (Final).
Hervey W. Stern. Dec 70, 17p Rept no. STB-71-4

Descriptors: (*Programmed instruction, Preparation), (*Professional personnel, Effectiveness), Reliability, Personnel management, Naval training, Teaching methods, Management planning, Statistical analysis.
Identifiers: Curriculum development, Expert opinions, Individual differences.

In the development and revision of curricula, subject-matter experts are frequently called upon to aid in specifying skill or knowledge requirements and to provide opinions on the degree of importance associated with the requirements for the establishment of a curriculum. If, however, these expert judgments are not reliable, their validity is automatically questionable. In order to evaluate this problem, data from a previous study was supplemented and analyzed for rate-rater reliability of a group of Navy subject-matter experts, including an analysis of individual differences. The rate-rater reliability for all 16 judges over a six month period was .59. Absolute changes in rating averaged slightly over half a scalar unit on a 6-point scale. When four raters were selected on the basis of their individual reliability, their combined rate-rater reliability was .68. Other measures indicate the selection of raters on an index of individual stability may increase reliability, although the effect this has on validity is not known. These findings indicate that a large number of raters does not insure high reliability, and that selecting a subset may result in an increase in precision in overall reliability. (Author)

A COMPARISON OF THE MILITARY AND CIVILIAN HEALTH SYSTEMS.
Mordechai E. Lando. Dec 70, 78p Rept no. CNA-Professional Paper-57

Descriptors: (*Public health, *Civilian personnel), (*Military medicine, Public health), Military personnel, Hospitals, Costs, Manpower studies, Medical personnel.
Identifiers: *Health services, *Military health services, *Civilian health services.

Military personnel were found to be in better health than their civilian compatriots. There is no way of determining to what extent this is due to starting out with a healthier population and to what extent it is due to the greater per capita expenditure discussed earlier. In addition, it was noted that military medical care is much more hospital intensive than in the civilian economy. To re-emphasize this point: in the Air Force in 1967, 74% of all those excused from duty were hospitalized whereas in the civilian economy, hospital days for males 17-64 were only 26% of their work loss days. AN APPROACH TO STANDARDIZING HUMAN PERFORMANCE ASSESSMENT.

John D. Engel. Oct 70, 14p* Rept no. HUMRRO-professional paper-26-70 Contract DAHC19-70-C-0012

Presented at the Planning Conference of 'Standardization of Tasks and Measures for Human Factors Research', held at Texas Technological Univ., Lubbock, Tex., on Mar 70.

Descriptors: (*Performance (Human), Measurement), (*Test construction (Psychology), Standardization), (*Performance tests, Standardization), Test methods, Visual acuity, Auditory acuity, Decision making, Symbols, Documentation.
Identifiers: Evaluation, Task analysis, Taxonomy Manipulation.

The standardization and evaluation of methods of performance assessment represents an important area of concern. In this paper an approach that concentrates on two critical areas and the relationship between them is discussed. These are: (a) a task classification system, and (b) a performance measure classification system. An example is presented that illustrates some preliminary research related to the use of a performance measure classification system. The paper concludes by suggesting areas and directions for future research efforts. (Author)

AN APPROACH TO THE DEVELOPMENT OF SYNTHETIC PERFORMANCE TESTS FOR USE IN TRAINING EVALUATION.

William C. Osborn. Dec 70, 11p Rept no. HUMRRO professional paper-30-70 Contract DAHC19-70-C-0012

Presented at the Annual Military Testing Association Conference (12th), French Lick, Ind., Sep 70.

Descriptors: (*Test construction (Psychology), Synthesis), (*Training, Test methods), Job analysis, Aptitude tests, Management planning, Quality control.
Identifiers: Task analysis, Training evaluation, Job relevant testing.

The paper describes an approach to the selection of inexpensive alternatives to fully job-relevant performance tests. Based on the concept of content validity, the approach is to utilize the skill and knowledge required of the trainee as a criterion for assessing the cost and job-relevance of fabricated alternatives to performance tests. Two job tasks are analyzed to illustrate the concept. (Author)

DEVELOPMENT OF AN EQUATION FOR EVALUATING JOB DIFFICULTY.

Donald F. Mead. Nov 70, 20p AFHRL-TR-70-42 See also AD-720 254 and AD-720 255

Descriptors: (*Job analysis, *Air force personnel), Regression analysis, Supervisory personnel, Mathematical prediction.
Identifiers: Evaluation.

A report is given of the first in a series of studies designed to produce a method for evaluating the difficulty levels of Air Force enlisted jobs. In the study, 250 job descriptions in the Medical Materiel Career Ladder were ranked on difficulty by supervising personnel using a complex partitioning system. Computation of interrater agreement for these rankings yielded an r of .93. Twenty-one variables were defined which might have entered into the judgments made by supervisors, and regression analyses subsequently identified three variables which predicted the job difficulty rankings with an R of .95. These three predictor variables were number of tasks performed, difficulty of tasks performed per unit time, and number of tasks performed, squared. Application of a shrinkage correction formula to test for chance errors resulted in a negligible correction to the obtained R . Developing weights for the three predictor variables in separate samples and cross-applying to predict the difficulty level of jobs in the opposite group yielded an R of .94 in both cross-applications. Comparisons on the rank order positions of the criterion jobs using predicted and rated difficulty values revealed nonsignificant differences. Results of the study indicate that the difficulty level of jobs within the Medical Materiel Career Ladder can be adequately determined using the derived three-variable regression equation. (Author)

CONTINUATION STUDY ON DEVELOPMENT OF A METHOD FOR EVALUATING JOB DIFFICULTY.

Donald F. Mead. Nov 70, 20p AFHRL-TR-70-43 See also AD-720 253 and AD-720 255

Descriptors: (*Job analysis, *Air force personnel), Regression analysis, Mathematical prediction, Maintenance personnel, Supervisory personnel.
Identifiers: Evaluation.

The paper describes the development of a multiple regression equation which satisfactorily predicted the difficulty level of 250 jobs from the Vehicle Maintenance Career Ladder. The correlation between the predicted values and the criterion values assigned the jobs by Air Force supervisors was .93. The research design was a replication of one used earlier with jobs from the Medical Materiel ladder. The results obtained in the study support the major findings of the earlier investigation. The same basic predictor variables combined to form the most effective prediction equation in both investigations. The primary factors reflected

in the job difficulty evaluation policy were number of tasks in the job description, difficulty level of tasks performed, and time spent performing the tasks. These findings provide support for the hypothesis that there are common factors which influence supervisors' judgments of job difficulty in all Air Force career ladders. (Author)

DEVELOPMENT OF A CONSTANT STANDARD WEIGHT EQUATION FOR EVALUATING JOB DIFFICULTY.
Donald F. Mead, and Raymond E. Christal. Nov 70, 20p AFHRL-TR-70-44
See also AD-720 253 and AD-720 254.

Descriptors: (*Job analysis, *Air force personnel), Supervisory personnel, Regression analysis, Correlation techniques.
Identifiers: Evaluation.

The paper describes the development of a multiple regression equation which captured the job difficulty evaluation policy of accounting and finance supervisors. The equation yielded predicted difficulty values for 250 jobs which correlated .95 with the supervisory rankings. These results validated the findings of two previous job difficulty studies using jobs from the Vehicle Maintenance and Medical Materiel Career Ladders. A constant standard weight equation was developed which reflected the job evaluation policy of supervisors from the three diverse career fields. Applying this equation to the appropriate predictor data from the three studies yielded valid difficulty measures for 750 jobs within the three career ladders tested. (Author)

DETERMINING TRAINING REQUIREMENTS.

1 Sep 64, 36p

Descriptors: (*Training, Systems engineering), Symposia, Education, Management engineering, Air Force personnel, Military requirements.
Identifiers: Air Force training programs, *Training programs.

With automation on the ascendancy, many of the simple but tedious jobs of the past are being converted to machine operation. Personnel must be retrained for different jobs requiring more complex skills to keep pace with our changing technology. No longer can training be looked upon either as 'terminal' or lacking in dignity. One of our national goals is that every citizen become employable and productive. Training has become a never ending requirement which will assume more and more importance as time passes. It is imperative, therefore, that training programs be designed for maximum effectiveness in terms of economy of operation and relevance to the operational requirement. The most logical approach to improving training appears to be through the application of scientific principles which underlies any engineering process. (Author)

COMPARISON OF TWO CURRICULA FOR TRAINING BASIC HOSPITAL CORPS SCHOOL STUDENTS.
Medical research interim rept.,
Dagmar E. Brodt, and Adele H. Wood. 16 Mar 71, 51p NAVMED-M43-03X-05-1

Descriptors: (*Training, *Medical personnel), Education, Pharmacology, Costs, Effectiveness, Injection (Medicine), Chemotherapeutic agents.
Identifiers: *Curricula, *Hospital corps.

The objective of this work unit was to compare the cost/effectiveness of a segment of the present subject centered curriculum with that of a new broad field organized curriculum Pharmacology and Patient Care (PPC), for training Hospital Corps School students to prepare and administer medications. Presentation of PPC required 81 instructional hours while the conventional courses required 126 hours. During a pilot study, selected instructors were oriented to teaching PPC; optimal content, content organization and sequence were determined; time requirements for course segments were identified; and evaluation instruments were assessed for validity and reliability. Comparison of scores on the criterion instruments showed statistically significant differences in favor of the experimental companies on the written tests; a statistically significant difference in favor of control companies in performance of the subcutaneous injection procedure; and no significant difference between the groups on performance of the intramuscular injection procedure. Feedback data on graduates obtained at their first hospital assignments showed a significant difference in scores on a knowledge test in favor of the experimental group and no significant difference between scores on a skill rating scale. The saving of 45 hours of instructional time through use of PPC represents a potential monetary saving of \$140.40 per student. (Author)

THE RELATION OF SAMPLE DEMOGRAPHIC CHARACTERISTICS TO JOB SATISFACTION.
Technical rept.,

Philip A. Jury, William Weitzel, Rene V. Dawis, and Patrick R. Pinto. 1971, 21p Rept no. 9001
Contract N00014-68-A-0141-0003

Descriptors: (*Job analysis, *Attitudes), (*Sociometrics, Job analysis), Factor analysis, Personality, Personnel management, Education, Industrial psychology.
Identifiers: *Job satisfaction.

In order to examine the effects of such demographic characteristics as sex, age, education, occupational, company and job tenure and management level on job satisfaction, the responses of 1139 exempt employees in six companies to 28 satisfaction scales were factor analyzed. In comparing the factor structures for the various demographic groupings, patterns of scale loadings across groupings were emphasized. It was expected that some factors would be common for all demographic groupings of employees, while other factors would vary in their patterns of scale loadings. The resulting factor structures showed that factors related to compensation and personal progress and development work aspects had very similar scale loadings for all groupings of employees. However, the two remaining factors that dealt with superior-subordinate interactions and the content of the organization were perceived differently among the demographic groupings. Thus the conclusion of the study was that demographic characteristics reflected a difference in the perception of organizational-related variables but not in the perception of individual-related variables for job satisfaction. EXPECTANCY THEORY' PREDICTIONS OF JOB SATISFACTION, JOB EFFORT, JOB PERFORMANCE, AND RETENTION OF NAVAL AVIATION OFFICERS.
Technical rept.,
Terence R. Mitchell, and Donald Albright. May 71.
37p Rept no: TR-71-17
Contract N00014-67-A-0103-0013. ARPA Order-454

Descriptors: (*Job analysis, *Naval personnel), (*Officer personnel, *Attrition), Performance (Human), Predictions, Aviation personnel.
Identifiers: *Job satisfaction.

Expectancy theory suggests that an individual's behavior can be predicted from the degree to which the behavior is instrumental for the attainment of outcomes multiplied by the evaluation of these outcomes. This theory was used to predict the effort, satisfaction, performance and retention of two squadrons of Naval Aviation Officers. The results provide strong support for the prediction of satisfaction and retention. Only moderate support was generated for the prediction of effort and performance. Modifications of the theory are suggested in light of the data presented. (Author)

PREDICTING THE EFFECTIVENESS OF NEW MENTAL STANDARDS ENLISTEES IN THE U. S. MARINE CORPS.
John A. Plag, Jerry M. Goffman, and James D. Phelan. Dec 70, 91p Rept no. NMNRRU-71-42

Descriptors: (*Naval personnel, Selection), (*Standards, Naval personnel), Marine Corps, Aptitude tests, Effectiveness, Predictions, Recruiting.
Identifiers: Personnel screening tests, Project 100000.

The study compares the performance and adjustment of 'new mental standards' Marines with enlistees of higher mental ability. About four out of ten new standards Marines fail to complete a two-year tour successfully, while only one out of four high ability Marines fail to do so. Thirteen of 34 pre-enlistment characteristics, 4 of 12 early training variables, and 5 of 17 later training variables have significant validities for predicting effectiveness during a first tour of duty for low ability Marines. The best of these predictors were combined into tables of odds for ready estimation of the chances that a recruit will successfully complete a two-year tour. Use of these tables of odds at recruiting stations could help in the selection for enlistment of Marine applicants most likely to serve effectively. (Author)

THREE METHODS FOR ESTIMATING DIFFICULTY OF JOB TASKS.
William B. Lecznar. Jul 71, 14p AFHRL-TR-71-30

Descriptors: (*Job analysis, Air force research), Air force personnel, Statistical analysis, Scale.

The exploratory study using a job inventory developed for the Medical Materiel Career Ladder is concerned with a simple evaluation of three methods for estimating the difficulty of tasks: rating on a relative scale; rank ordering; and computing an index from average grade job incumbents performing each task. The data suggest the rating approach is one to be preferred although some additional questions arose concerning possible effects of task wording on variability across judges, or raters. (Author)

MEDICAL APPLICATIONS OF AEROSPACE SCIENCE AND TECHNOLOGY.
Final rept., 1 May 1967-31 May 1968.
David Bendersky. 31 May 1968. 86p NASA-CR-95100
Contract NASr-63 (13)

Descriptors: *Aerospace environments. *Medical science. *TECHNOLOGY UTILIZATION. Bibliographies. Bioastronautics. Bioengineering. Electrocardiography. Electrodes. Medical equipment. NASA programs.

The transfer of aerospace generated technology to applications in the non-aerospace biomedical field are discussed. Procedures have been developed for the efficient and orderly transfer of applicable science and technology and consist of 5 basic steps: (1) define the specific biomedical problem; (2) identify potential solutions through literature searches, circulation of problem abstracts to research centers and contractors; and personal contacts; (3) modify the original technology, as required, to adapt it to the problem; (4) evaluation of the technology by the investigators who submitted the problem; and (5) document and disseminate information on successful transfers. Covered in this report are 94 biomedical problems submitted by participating medical schools. Based on literature searches and other retrieval techniques, 22 successful technology transfers were possible out of potential solutions for 46 of the problems. Several NASA Tech Briefs pertaining to biomedical devices are included.

Texas Univ., Austin.
MEDATA: A NEW CONCEPT IN MEDICAL RECORDS MANAGEMENT.
Caroline Horton, Tate M. Minckler, and Lee D. Cady, Jr. 1967. 42p NASA-CR-86715
Contract NSR-44-012-039
Presented at the Fall Joint Computer Conf. Nov 1967.

Descriptors: *Computer programs. *Medical personnel. *Medical sciences. Conferences. Data processing terminals. Data retrieval. Data storage. Fortran. Magnetic tapes. Research.

MEDATA, an automated medical records system, represents an organized approach to the collection, storage, and retrieval of medical data. This completely user-oriented system takes advantage of the background and training of the medical secretary and simultaneously bypasses the conventional keypunch operators and coders. It is capable of responding directly (in his own terminology) to the user who lacks extensive computer background. The system is inexpensive to maintain, and the programs and basic system concepts are machine independent. (Author)

Michigan Univ., Ann Arbor. Center for Research Utilization of Scientific Knowledge.
ORGANIZATIONAL BEHAVIOR RESEARCH UTILIZATION PROCESSES. A STUDY OF PROCESSES FOR THE UTILIZATION OF SCIENTIFIC FINDINGS FROM ORGANIZATIONAL BEHAVIOR RESEARCH.
Final rept.
7 Oct 1967. 196p NASA-CR-89837
Grant NGR-23-005-116

Descriptors: *Human behavior. *Leadership. *Management. *Personnel subsystems. *Research projects. Group dynamics. Statistical analysis.

Seminars, individual questionnaires, evaluation sheets, and assessment sheets are employed as techniques for utilization of organizational behavior research knowledge by a specific complex organization element. The organizational research material selected for use pertained to promotion of new patterns of management and motivational approach to supervision, personnel performance and productivity, and most effective practices of supervision and management of professional and scientific personnel. Problems of supervision and management in the specified organization element are identified, described, and assessed. Feasibility of applying research knowledge to such problems is determined. Alternative methods which could be used to transfer and apply research knowledge to management problems are developed and evaluated. Summary conclusions offered are that the seminar approach is an effective method of transferring behavioral science research knowledge to managers, and that the several utilization techniques must be viewed in terms of characteristics of the using organization and its leadership.

Texas A and M Univ., College Station.
A PROBABILISTIC APPROACH TO THE LONG RANGE PLANNING OF MANPOWER AND OTHER RELATING ELEMENTS.
Richard Andrew Lejk. May 1967. 258p NASA-CR-85119
Contract NAS9-4317

Descriptors: *Costs. *Management. *Manpower. *Mathematical models. *Probability theory. Personnel. Project management. Regression analysis. Tradeoffs.

Long range planning is considered by a probabilistic model for consolidating project requirements and allocating budgetary limitations. Attention is given to the estimation of total manpower requirements, the development of manpower distribution functions, and the determination of related personnel support requirements. Regression analysis was used to predict total manpower requirements and their allocation over the life cycle of the project; and a constrained-weighted regression technique is presented for a limited data base. A matrix technique is used to determine associated-personnel support requirements and costs for each project; and forecasting the total budgetary limitation for the planning organization via regression or econometric methodology is described. The gap or difference between manpower and budgetary requirements is discussed, and integer programming and response surface technology are used to eliminate this gap. Through this alignment process and the recycling of the rescheduled individual project requirements by a complete data model a master long-range plan is produced.

ORNL-4231

Oak Ridge National Lab., Tenn.
PROGRAM FOR SELECTING FIRSTLINE FOREMEN.
G. F. R. Johnson, and C. L. Jaffee. Mar 68. 30p
Contract W-7405-eng-26

Descriptors: (*Personnel management, Selection). Management planning. Standards. Performance (Human).

The development and use of a technique for the evaluation of managerial or supervisory skills are described. The technique of simulation represents an attempt to replicate the essential aspects of a given situation (in this case the supervisory job) so that the prediction of an individual's likelihood of success on a managerial job will be enhanced. Techniques such as the in-basket exercise, leader-

less group discussion and business game are discussed, and the samples of the types of information generated are included as well as their usefulness. (Author)

THE DEVELOPMENT OF TRAINING OBJECTIVES.
Roger G. Smith, Jr. Jun 65. 109p Research bull.
HumRRO-RB-11 AD-448 364; N64-32681
Contract DA44 188AR02

Descriptors: (*Military training, Performance tests). (*Military personnel, Training). (*Research program administration, Military training). (*Training, Effectiveness), Training devices, Education, Job analysis, Technicians, Instructors, Military organizations, Maintenance personnel, Decision making, Achievement tests.

Modern concepts and techniques used in determining training objectives are described. A training objective is defined as a precise statement of one of the performances expected of a student upon completion of a course, a complete list of such objectives constituting the mission of a course. The concepts and techniques described are based on research performed by both military and civilian researchers in the field of training. The development of job-related, detailed statements of objectives is considered to be a matter of the first importance in designing effective training programs. These objectives permit every element of a training program--lessons, texts, practical exercises, and examinations--to fall into line in a consistent manner. Training objectives that are job relevant will provide for a course that will also be responsive to the needs of the unit to which the soldier will go after training. The techniques described were selected as being practical for Army training personnel.

JOB PERFORMANCE AIDS AND THEIR IMPACT ON MANPOWER UTILIZATION.
Albert B. Chalupsky, and Thomas J. Kopf. May 67. 101p WDL-TR-3276
Contract DL-81-05-67-06

Descriptors: (*Manpower studies, Performance (Human)). Reviews. Job analysis, Electronic technicians, Nurses, Hospitals, Display systems, Training devices, Efficiency.

The investigation was designed to review and synthesize the results of job performance aid research and application and to explore the current and potential impact of such aids upon industrial manpower utilization. The study involved a review and analysis of relevant research literature and reports of job aid applications. In addition, a field study was conducted of job performance aid usage in two distinctly different occupational areas: electronics assembly and patient care. Interviews were conducted in 24 organizations, twelve representing each occupational area. The results show that, depending upon their design and usage, job per-

formance aids can compensate for lack of training and experience, improve job quality, and increase productivity. Evidence is generally lacking concerning the extent to which job performance aids can compensate for basic aptitude deficiencies. The impact of job aids is particularly apparent in complex or lengthy tasks, diminishing in effectiveness as tasks are subdivided into short cycle, repetitive operations. A basic framework for advancing the field of job performance aids is proposed and discussed. Recommendations are made for comprehensive job aid development and demonstration efforts. On a more basic level, a series of research questions are posed, the solutions to which would contribute to better understanding and long-term utilization of job aids. (Author)

Descriptors: (*Economics, Employment), (*Employment, Training), Job analysis, Public health, Social sciences, Technicians, Personnel, Selection, Hospitals, Manpower studies.
Identifiers: On-the-job training, Community Action Program.

The first part of this report documents the experiences of staff and trainees during the pre-vocational phase (II) of the New Health Occupations Program. The report highlights the major findings coming out of the classroom and the preliminary on-the-job training (OJT) experiences, and discusses a number of other facets of the program, including the crucial problem of job development. Included in the appendices are the training curriculum and rationale originated by staff specifically for the Health Occupations program. The second section outlines the development of training programs for new occupations, based on experiences with the prototype Health Occupations program. It includes descriptions of training and employment proposals for five occupations where an unmet public service need has been identified, either by the institution or agency responsible for its delivery or by the community which has demonstrated the consequences of service inadequacy. The origin of each proposal is given, along with the steps taken to develop occupational training to meet the needs as documented, the specialists consulted in agencies or institutions concerned, and the present stage of development for each occupational proposal. COMPUTER-BASED JOB MATCHING SYSTEMS: AN EXPLORATION OF THE STATE OF THE ART AND THE PROPOSED NATION-WIDE MATCHING SYSTEM.
Frazier Kellogg. 1967, 326p
Grant DL-91-23-67-11

Descriptors: (*Manpower studies, Data processing systems), State-of-the-art reviews, Computers, Computer personnel, Employment, United States Government, Education, Industrial relations, Personnel management, Symposia.
Identifiers: Job matching systems.

In its report to the President and the Congress, the National Commission on Technology, Automation, and Economic Progress recommended '... that a computerized, nationwide service for matching men to jobs be established.' Such a service was expected to improve and extend labor market information, and thereby help to reduce unemployment and underemployment. But even as the Commission advanced the proposal, companies, professional associations, and public organizations had started to design and operate a variety of computer-based 'matching systems.' In short, many systems, local and national in scope, and internally as well as externally oriented to labor markets were operating or in advanced stages of design. In the spring of 1966, the United States Employment Service awarded a contract to a consulting firm for help in designing a national system and in developing several operational pilot projects. Against this background a two-day workshop was planned. It was intended to accomplish several purposes. First it would bring together people involved in the operation and design of a variety of different kinds of matching systems to describe what they were doing. Second, the workshop was planned to bring the 'doers' in matching systems operation and design together with people from the academic community with backgrounds in manpower research -- especially the operation and structure of both internal and external labor markets. This report is the product of the workshop. (Author)

The Research Report is the twenty-second and final report in a series prepared for the Office of Economic Opportunity and the U. S. Public Health Service in connection with this study of six of the twelve pilot projects commissioned by these agencies in fiscal year 1967. The pilot projects were designed to develop effective operational procedures for increasing the supply of home health aides through utilization of older, low-income people, and to test the effectiveness of these procedures. The projects included in our work, and the reports issued for each are included.

A PILOT STUDY TO DETERMINE THE FEASIBILITY OF INVESTIGATING NATIONALLY THE IMPACT OF LICENSING PRACTICES ON THE AVAILABILITY AND MOBILITY OF NON-PROFESSIONAL MANPOWER IN OCCUPATIONS WHERE SKILL SHORTAGES EXIST.
Final rept.,
Benjamin Shimberg, and John V. Moe. May 68, 106p*
Grant 91-32-68-18

Descriptors: (*Personnel management, *Job analysis), Costs, Education, Ophthalmology, New York; Florida, Illinois, Texas, California, Personnel, Maintenance personnel, Medical personnel, Industrial research, Research program administration, Performance tests, Industrial training, Manpower studies.

This document is the final report for a study which was conducted to explore the feasibility of obtaining information bearing on the impact of licensing on job entry and interstate mobility in certain non-professional occupations. Licensing procedures in the skill shortage occupations were studied in five geographically diverse states, in order to secure information about the structure, process, and effects of occupational licensing in those states. The report presents an analysis of the effects of licensing and recommendations for future research. Licensing does appear to inhibit both job entry and interstate mobility, and specific aspects of the licensing process which appear to contribute significantly to this inhibition are discussed. Grant DL-91-23-67-57

Descriptors: (*Technicians, Hospitals), (*Manpower studies, Personnel management), Urban areas, Job analysis, Medical personnel, Employment, Standards, Training, Optimization, Questionnaires, Professional personnel, Supervisory personnel, Statistical data, Data processing systems, Students, Tables.
Identifiers: Pilot studies, Employees, *Paramedical technicians.

The key objective to this pilot study was to explore the duties performed by employees in selected paramedical occupations, and the characteristics and skills that hospitals required of these employees. A second objective was to compare their hiring standards, as measured by the required education, training, and work experience, with their actual duties and functions performed on the job. The hypothesis to be tested is that the hiring standards established by hospitals are higher than needed for the duties performed, with the result that it is difficult to fill many paramedical jobs. Identifiers: Surpluses, Shortages, Interviews, Estimates, Lead time.

The problem to which the study addresses itself is the use of current manpower statistics as a basis for arriving at estimates of educational and training requirements for jobs in the United States. This is a fundamental use in manpower planning. From the estimates lead times are determined for the development vocational and professional skills. These lead times serve as a basis for anticipating shortages or surpluses of labor and thus influence the allocation of public funds for vocational and professional education. (Author)

Identifiers: Health services, Community development.

Housing and urban development must necessarily include a continuing interest in health and health delivery systems. Such an interest is a logical outgrowth of the federal role in urban development, and herein lies a special need for co-ordination with other federal programs that deal directly with health and health care delivery systems. Furthermore, the developing structure of the model cities program indicates an even deeper, more direct concern for community health. It is with these relationships in mind that a general study of health services was undertaken. (Author)

Generally speaking, the study indicates that everything else being equal, the 8-hour day and 40-hour week are best in terms of efficiency and absenteeism and that higher levels of hours are less satisfactory. The results of the same increases in hours may vary widely according to the physical exertion required and the degree of control which the worker has over the job. (Author)

HEALTH MANPOWER: 1966-75 A STUDY OF REQUIREMENTS AND SUPPLY, Neal H. Rosenthal, Annie Lefkowitz, and Michael Pilot. Jun 67, 53p BLS-323

Descriptors: (*Medical personnel, *Manpower studies), Labor, Statistical analysis, Predictions.
Identifiers: Projected estimates, Manpower requirements, Manpower estimates.

The first part of the report focuses on the medical and health services industry. It includes a discussion of 1966 employment and shortages and projected 1975 manpower requirements. The second part of the study is about health occupations, and also presents information on 1966 employment and shortages and projected 1975 manpower requirements. In addition, it includes a discussion of the projected supply of health workers, an analysis of supply and demand, and recommendations on how supply can be expanded to meet projected needs. (Non-health occupations in the medical and health services industry are not discussed separately; they are only a small part of the Nation's total employment in those occupations, and their training is not significantly different from their training in other industries.) Following the body of the report are several appendixes, including statistical tables, a discussion of the methodology used to develop the projections, and a selective bibliography of health manpower studies. TECHNICIAN MANPOWER: REQUIREMENTS, RESOURCES, AND TRAINING NEEDS.

Jun 66, 112p Bull-1512

Descriptors: (*Technicians, Manpower studies), Education, Employment, Training, Statistical analysis, Predictions.

Identifiers: *Manpower requirements, *Manpower resources, Projected estimates.

The report presents the results of a comprehensive study of current and future technician manpower conducted by the Bureau of Labor Statistics. Emphasis is placed on the ways in which persons are trained for technician jobs, and on the projected supply and demand for these workers. Extensive information also is presented on the personal and educational characteristics of technicians and the nature of their work. (Author)

THE ROLE OF THE CITY UNIVERSITY OF NEW YORK IN MEETING HEALTH PROFESSION MANPOWER NEEDS.
Robert B. Parks, Elias H. Porter, and Marian M. Wood. 15 Jan 68, 83p
Grant OEO-8783

Descriptors: (*Medical personnel, Training), (*Programmed instruction, Universities), Leadership, Public health, Medicine, Predictions, Budgets, Nurses, Dental personnel, Medical technicians, Management planning, New York.
Identifiers: Health care, Objectives, Curricula.

The concept of allied health professions, coupled with that of team training and team service, all under the leadership of traditional medicine, calls for an educational program to accompany the program of comprehensive health services for the entire population. Universities throughout the country must be responsive to the health care service needs in the community as a whole—a relatively new perspective in medical education not yet well translated into the academic process. AN INVESTIGATION OF TASK ALLOCATION DECISIONS IN AUTONOMOUS WORK GROUPS IN A CONTINUOUS PROCESS INDUSTRY.
Doctoral thesis.
Gerald Isaiah Susman. 1968, 167p

Descriptors: (*Personnel management, Industrial plants), (*Job analysis, Standards), Group dynamics, Decision making, Classification, Compatibility, Management engineering, Efficiency, Performance (Human), Manpower studies, Theses.
Identifiers: Autonomous groups, Continuous process methods.

The dissertation investigates industrial work groups whose membership is allowed to make their own decisions concerning task allocation. The problem under consideration is to isolate the variables which relate to task allocation decisions. These variables concern the criteria which serve as a basis for allocation decisions and the positive and negative consequences these group decisions have with regard to managerial objectives. THE DEMONSTRATION AND EVALUATION OF AN EXPERIMENTAL MEDICATION SYSTEM FOR U.A.M.C. HOSPITAL. VOLUME 1.
Kenneth N. Barker. Jul 67, 416p
Grant PHS-HM-00323-01
See also Volume 2, PB-184 712.

Descriptors: (*Chemotherapy, *Hospitals), (*Automation, Hospitals), Costs, Experimental design, Feasibility studies, Efficiency, Drugs, Distribution, Personnel, Data processing systems, Packaging, Systems engineering.
Identifiers: UAMC (University Arkansas Medical Center), University Arkansas Medical Center.

The report describes an attempt to install, demonstrate, and evaluate a new experimental medication system developed for the University of Arkansas Medical Center Hospital (329 beds). Characterizing features of the experimental system were the incorporation of the centralized unit-dose dispensing and the editing center concepts, plus the use of unit record data processing equipment. A chapter entitled Background is included to provide perspective. Next the experimental system is described, first in a general and simplified way and then a second time in considerable detail with illustrations. Simplified flow diagrams of the control and experimental systems appear at the front of the chapter, as do floor plans. The following chapter examines the performance of two particular components of the experimental system, dispensing and editing—data processing. The evaluation programs—medication errors, work measurement, attitudes, costs and legal—are introduced in the next chapter which includes a discussion of some of the general considerations in the overall approach to the evaluation of the two systems. Each evaluation program is then presented in its own chapter, each representing a separate study designed and conducted by a different investigator.

INCENTIVE MANAGEMENT FOR HOSPITALS.
J. J. Jehring. Sep 69, 111p
Proceedings of Conference, Wisconsin Univ., Madison 5-6 Jun 68.

Descriptors: (*Hospitals, *Management engineering), Costs, Management control systems, Management planning, Symposia, Personnel management, Motivation, Social psychology.

The cost of hospital care is the most rapidly rising component of the price index. On June 5 and 6, 1968, at a University of Wisconsin Conference, experts discussed new approaches that might be considered in dealing effectively with controlling costs. Hospital administrators and managers who were currently working on some of these new techniques exchanged experiences. The following is a table of contents of the proceedings of the Conference: The Impact of Motivation on Hospital Management, David E. Schrieber; Systems Incentives in the Nonprofit Hospital, J. J. Jehring; Incentive System at Long Beach Memorial Hospital, Donald Camer; Subsystem Incentives at Baptist Hospital, Pensacola, Florida, John Schull; Management by Objectives, David E. Schrieber; A Look to the Future, Edward J. Connors; and Appendix—Baptist Hospital Data. The discussions of these papers are also presented in

this volume. The Conference was sponsored by the Center for the Study of Productivity Motivation, Graduate School of Business, University of Wisconsin; Management Institute, University Extension, University of Wisconsin; and Wisconsin Hospital Association. (Author)

THE EFFECTS OF WORK RATE UPON JOB SATISFACTION.
Doctoral thesis.
Stephen Wollack, Dec 69, 96p

Descriptors: (*Personnel management, Impact), (*Attitudes, Analysis), Performance tests, Correlation techniques, Employee relations, Motivation, Fatigue (Physiology), Assembling, Visual inspection, Research program administration, Automation, Theses.
Identifiers: Job satisfaction, Working rate (Human), Boredom.

Increased job mechanization frequently has resulted in some loss of control by the worker over his work pace. The extent to which a worker is able to control his work pace is one variable which seems to be related to job satisfaction. This study was intended to determine whether a relationship can be demonstrated between an individual's preferred rate of work on a specific task (self-paced), the rate of work as dictated by the task (assigned-paced), and job satisfaction. CONCEPTS AND MEASUREMENTS FOR MANPOWER AND OCCUPATIONAL ANALYSIS.
James G. Scoville, Sep 69, 210p*
Report on Research on the Conceptual Bases and Uses of Various Manpower and Occupational Systems. Sponsored in part by Department of Labor, Washington, D.C.

Descriptors: (*Job analysis, Research program administration), (*Personnel management, theory), Statistical data, Problem solving, Quality control, Cost effectiveness, Models (Simulations), Public relations, Correlation techniques, Data processing systems, Management planning, Manpower, Industrial relations.
Identifiers: Concepts.

In recent years, considerable improvements have been made in the occupational data available for public use. The report tries to go beyond the stage of a user's handbook and to explore a number of related problems in the theory and measurement of work. The report covers several frequently used classification systems, considering their conceptual basis and the practical shortcomings which characterize them. Attention is addressed to development of an economic theory of the determination of the content of jobs and the relationships between various jobs within and between employing units. The desirable items of data to be collected are summarized in the light of the model, public policy information needs, and the goal of utility to researchers in general. (Author)

LIFETIME EARNINGS AND PHYSICIANS' CHOICE OF SPECIALTY.
Frank A. Sloan, Dec 69, 23p P-4068-1
Sponsored in part by Public Health Service, Washington, D.C.

Descriptors: (*Medical personnel, Motivation), Job analysis, Money, Mathematical models, Regression analysis, Correlation techniques, Attitudes, Decision making.
Identifiers: Professional specialization, Lifetime earnings.

The objective of the study is to determine whether lifetime earnings in various specialties influence physicians' choice of field. If income does affect these choices, what is the magnitude of the supply response. Although income payments to practicing physicians in certain specialties felt to be shortage fields may be a politically infeasible policy instrument for influencing specialty choice, increases in residents' salaries could have some appeal for legislators. The effectiveness of both policies is evaluated. (Author)

STUDIES IN THE USE OF HEALTH SERVICES BY FAMILIES ON WELFARE: UTILIZATION BY PUBLICLY-ASSISTED FAMILIES.
Richard Pomeroy, Robert Lejeune, and Lawrence Podell, 1 Apr 70, 203p NCHS-RD-70-4
Grant PHS-CH-00369
See also PB-190 391 and PB-190 392.

Descriptors: (*Public health, *Sociology), Culture, Population, Behavior, Attitudes, Economics, New York, Urban areas, Statistical data.
Identifiers: *Social welfare, *Demographic surveys.

The report examines the personal, social, and cultural characteristics related to the utilization of health resources by a sample of 2179 New York City welfare mothers. Such a sample is of particular interest for the analysis of medical attitudes and behavior in that public assistance recipients can be regarded as relatively homogenous in their socio-economic status and their medical treatment is provided without financial cost of them. Thus the conventional economic determinants of medical behavior should be minimized in their effect. Throughout the discussion to follow the utilization behavior of this sample will be compared to that of other populations. However, caution must be exercised in such comparisons. In addition to their status as welfare recipients, our sample differs from others in its reliance on medical care provided by clinics rather than by private physicians. (Author)

AN ANALYSIS OF IOWA'S JOB TRAINING PRIORITIES BASED ON MANPOWER PROJECTIONS FOR 1975.
Catherine A. Palomba. 1970, 171p

Descriptors: (*Industrial training, *Iowa), (*Job analysis, Statistical data), (*Employment, Mathematical prediction), Industries, Manpower, Data processing systems, Regression analysis, Scheduling, Classification, Advanced planning, Mathematical models, Theses.
Identifiers: Priorities.

The question of training priorities is of importance to all who have the responsibility of planning education and training programs. The purpose of this study was to develop projections of occupational manpower requirements for Iowa for 1975. Using 1960 Iowa census data as a starting point a matrix of 165 occupations and 64 industries was developed. Regression estimates were then used to obtain projections of employment requirements to 1975. Projections of occupational requirements in total and by industry were obtained. (Author)

INCREASING THE AVAILABILITY OF PUBLIC HEALTH NURSES IN RURAL SETTINGS IN MINNESOTA.
Rept. for 1 Oct 65-30 Dec 68.
Francis Decker, and Alberta P. Wilson. Jul 70, 154p HSRD-70-16
Grant PHS-CSP-69477-03-68-22

Descriptors: (*Nurses, *Public health), (*Rural areas, Nurses), (*Minnesota, Nurses), Recruiting, Sociology, Population, Training, Economics.
Identifiers: *Health Services Research and Development, *Demography.

The shortage of prepared public health nurses is particularly acute in rural areas and Minnesota is largely rural in economic and political structure. As is true with other professional groups, the movement of the general population toward urban centers has had an adverse effect upon the availability of public health nurses in the rural areas of Minnesota. The rising number of vacant public health nursing positions in out-state areas, hindering the expansion of community services, indicated that special efforts were needed to attract more nurses into public health. Since the public health nursing staffing problem in Minnesota was most acute in the rural areas, it was decided to focus efforts in that direction. Hence, a project was developed with the purpose of improving, both quantitatively and qualitatively, the staffing of rural public health nursing agencies in Minnesota. (Author)

TRANSFERABILITY OF MILITARY-TRAINED MEDICAL PERSONNEL TO THE CIVILIAN SECTOR.

Jul 70, 339p
Contract DL-81-09-68-01

Descriptors: (*Medical personnel, Military training), (*Transfer of training, Public health), Feasibility studies, Factor analysis, Attitudes, Classification, Motivation, Decision making, Job analysis, Wages, Manpower studies.

The exploding demand for medical and health services and evolving changes in the systems for

delivering them have been accompanied by widespread shortages of many kinds of personnel, professional and subprofessional. There is increasing interest in a large potential, but mainly untapped, source of supply: the veterans of the Armed Forces who received specialized medical training and experience while in service. The report presents the findings of a study of this supply, undertaken to determine the labor market characteristics of the men who comprise the supply; the extent of their transferability and transfer to civilian medical/health employment after their release from the Armed Forces; the reasons why more of them did not transfer; and the conditions under which the transfer rates might be raised. Contract HSM-110-69-86

Descriptors: (*Medical services, *Systems analysis), Computerized simulation, Data processing, Public health, Communities, Information systems, Medical records, Economic analysis, Cost estimates, Cost engineering, Medical personnel, Evaluation, Development.
Identifiers: *Health services research and development, *Health care delivery systems.

The report is phase 1 in the development of a ranked set of viable alternative health care delivery systems. The goal for this first year's effort was the development of a structure for a simulation model of the health care delivery system. Results of the following specific tasks are described: establishing an interdisciplinary team, model building, and data acquisition and processing. This report also proposes the application of systems analysis techniques to the development and testing of alternative health care delivery systems. The report demonstrates the feasibility of developing evaluation methods, including a simulation model, the definition of system boundaries, the community, and external constraints. For each major element of the system: population, the delivery system, costs, and finance, a conceptual model has been developed with input requirements and resulting outputs. Conceptual case-types are presented. The physical unit of the system is defined as a service-treatment station, and this concept is explored in detail. (NCHSRD abstract)

Identifiers: *Health services research and development, *Automatic multiphasic health testing and services.

This is the second volume of a 3-volume series titled 'Provisional Guidelines for Automated Multiphasic Health Testing and Services,' prepared by the Center's AMHTS Advisory Committee. It reviews operational principles and quality control. Automated Multiphasic Health Testing and Services (AMHTS) is the use of automated tests and measures to detect probable early (presymptomatic) disease and consequent diagnostic examinations and services. AMHTS has been principally developed and used by industrial and prepaid group health plans as an expeditious way of providing preventive health care. NCHSRD is determining the feasibility of adopting AMHTS to Federal health programs and is conducting long-term epidemiological, biomedical, economic behavioral, and technologic investigations. EVALUATION OF PEDIATRIC CARDIOLOGY TRAINING AND TESTING.
Final rept.,
F. H. Adams, J. W. DuShane, S. Blumenthal, P. R. Lurie, and D. G. McNamara. 1967, 224p PH-43-67-1452-1
Contract PH-43-67-1452

Descriptors: (*Pediatrics, Cardiology), (*Cardiology, Education), Medical personnel, Children, Heart, Evaluation, Projects.
Identifiers: *Pediatric cardiology.

The specialty field of Pediatric Cardiology was studied in depth in relation to need, training, and evaluation of training. Ninety-three percent (93%) of the diplomates certified prior to 1967 participated in the study. Their demographic characteristics are described. The roles of a pediatric cardiologist were determined by three separate techniques which produced similar results: daily diaries; professional workshops; observation of professional activities. From the studies, a definition of a pediatric cardiologist was derived. Previous written examinations and oral examinations were evaluated. The results of these findings plus the determination of roles of a pediatric cardiologist stimulated the development of new testing and evaluation procedures. New criteria and standards for training programs in pediatric cardiology were developed. A projection of the need for pediatric cardiologists by the year 1980 was determined. It is concluded that the current number of candidates certified annually is inadequate to meet this projected need.

THE DEVELOPMENT OF OCCUPATIONS IN HEALTH TECHNOLOGY.
Doctoral thesis.
Carol Anderson Brown. 1971, 379p DLMA-91-34-68-20-1
Grant DL-91-34-68-20

Descriptors: (*Manpower utilization, Government policies), (*Medical personnel, Manpower utilization), Job analysis, X ray apparatus, Medical laboratories, Job satisfaction, Attitudes, Sociopsychological surveys, Hospitals, Education, Legislation, Political objectives, New York, Questionnaires, Theses.
Identifiers: *Health manpower, Licenses, Occupational structure, New York City (New York), Long Island.

The study examined the general question of how the place of an occupation in the economic division of labor becomes shaped and defined. The shaping was seen as basically a political process, a utilization of power in various forms by interested parties acting with the conscious intention of gaining control over the economic activity of themselves and others for the sake of economic benefits. The study examined the health industry, as a whole and, specifically, two sub-sectors, the fields of x-ray technology and clinical laboratory technology. Two recently passed licensing laws were examined: the licensure of x-ray technicians in New York State and the licensure of clinical laboratory technicians in New York City. A small survey of technicians in five hospitals in New York City and Long Island indicated their attitudes toward their occupations. (DLMA abstract)

Descriptors: (*Manpower utilization, *Hospitals), (*Medical services, *New York), (*Medical personnel, Manpower utilization), Manpower utilization, Skilled workers, Neighborhoods, Salaries, Work measurement, Unskilled workers, Statistical data, Cost analysis, Substitutes, Correlation techniques, Factor analysis, Theses.
Identifiers: Health manpower, Technology, Hospital manpower.

The purpose of the study was to determine the degree of manpower complementarity and substitutability of different qualities of labor, the causes of manpower substitution, and the implications of such substitution for the quality of hospital services. The New York City voluntary and municipal hospital systems were chosen for the analysis because the two systems operate under different incentives and constraints. Statistical data on the hospital skill level, size, case mix, case severity, technology, neighborhood characteristics, skilled wage rates, skilled workload, and costs per patient day were analyzed for both hospitals in 1955 and 1965. Various tests of the degree of manpower complementarity and substitutability were developed and applied in both hospital systems. The relationship between skilled labor shortages and manpower substitution was examined and the statistical relationship between the hospital skill level and other variables was tested for 1965. The relationship between hospital skill level and hospital quality was examined. (DLMA abstract)

NON PHYSICIAN PERSONNEL IN AMBULATORY CHILD HEALTH CARE: A REVIEW.
Jana Mossey, and Sally Nicholson. Mar 71, 105p* HSRD-71-7
Grant PHS-HS-00239

Descriptors: (*Public health, Personnel development), (*Children, Public health), Education, Manpower utilization, Medical services.
Identifiers: *Health services research and development, *Health care services, Ambulatory child health care, Child health care services, Health workers.

Organization of services and types of personnel involved in giving child care have undergone many changes in recent years. Services rendered can no longer be described in terms of the hospital, the well child clinic and the doctor and the nurse. The review emphasizes trends in preferring and utilizing personnel for pediatric ambulatory care facilities. The material presented is a sample of existing patterns and proposed developments rather than a

comprehensive presentation of all relevant programs. Two specific areas were explored: details of the care setting and the specifics of the function, supervision, and educational requirements of allied health workers. Child health care programs are moving toward comprehensive care in a location accessible to the patient and administratively answerable to community needs. Includes an annotated bibliography of 72 citations and 4 appendices. (HSRD abstract)

STUDENT HEALTH OPPORTUNITIES PROGRAM: A SUMMER YOUTH EMPLOYMENT PROGRAM.

Final rept.

Feb 69, 103p DLMA-92-32-70-01-1
Grant DL-92-32-70-01

Descriptors: (*Employment, Students), (*Students, Personnel development), (*Hospitals, Specialized training), Project planning, Reviews, Evaluation, Questionnaires, Manpower utilization.

Identifiers: *Summer youth employment programs, *Disadvantaged groups.

The summer youth employment program discussed was designed to provide disadvantaged high school students with opportunities for self-development by exposing them to a variety of hospital-based health careers during the summer vacation period, and to stimulate interest in employment in health services to help meet the growing need for qualified personnel in this expanding industry. Included in the report is a history of the project, sections on selection of hospitals and students, program components, results and recommendations. The appendices include a model application form for students, reports of orientation meetings for hospital administrators and students, student questionnaire, hospital evaluations, and suggested guidelines for evaluation. Identifiers: Social health technician, Disadvantaged groups.

The monograph delineates the work carried out by the New Health Occupations Program whose objective it is to work with city hospitals and private medical centers to restructure and improve the local health services delivery system in New York City, and in so doing open up new career opportunities in the health field to disadvantaged adults. The monograph relates how this program has resulted in the establishment of a new kind of health worker - the Social Health Technician, trained to carry out a broad range of social service and health assignments. TOWARD A CAREER LADDER IN NURSING: UPGRADING NURSE'S AIDES TO LPNS THROUGH A WORK-STUDY PROGRAM.

Final progress rept. Apr 67-May 70.

May 70, 61p DLMA-82-34-67-48-1
Contract DL-82-34-67-48

Descriptors: (*Medical personnel, *Personnel development), (*Nurses, Personnel development), Specialized training, Employment, Upgrading, Motivation, Tests, Performance evaluation, Vocational guidance, Vocational interests, Education.

Identifiers: *Nurse aides, Licensed practical nurses.

The purpose of the project was to demonstrate the feasibility of upgrading Nurse's Aides to Licensed Practical Nurses through a part-time work, part-time training (work-study) program, linking up a major urban hospital system with an MDTA training program, under union sponsorship. The project provided remediation classes, high school equivalency classes, training allowances, and counseling. Candidates for the program were carefully selected on the basis of achievement test scores, job evaluations, and attendance records. Additionally, a quota was established for each hospital, setting the number of aides who could enter training without seriously depleting the nursing staff. (DLMA abstract)

Prepared in cooperation with Beth Israel Hospital, Boston, Mass.

Descriptors: (*Psychosomatic disorders, Diagnosis), (*Questionnaires, Psychosomatic disorders), Diseases, Medical examination, Psychology.

Identifiers: *Ambulatory Care Project, *Health Services Research and Development.

Psychological questionnaires were administered to Screening Clinic patients to detect the presence of functional disease as an element in the presenting complaints of ambulatory patients. (Screening Clinic patients are those who are either new to the Beth Israel Hospital or have not been seen during the preceding six-month period. Each patient is seen briefly by the medical resident in this clinic who, on the basis of a brief history and physical examination, refers the patient for further diagnostic or therapeutic activity.) The screening physician recorded his evaluation of the presence of functional or organic illness in the patient at that particular time. Six months later, a record review assessed the patient's course in the medical system and judged whether an organic or functional etiology was described for the chief complaint. These assessments were compared to the results of the psychological questionnaires. (Author)

Identifiers: *Health Services Research and Development, *Ambulatory Care Project, *Protocols, *Chronic diseases.

For the purpose of the further development of the chronic disease management portion of the ACS, certain data must be compiled relative to the prevalence of chronic disease both singly and in

combinations, as well as an indication of the frequency of patient visits for various chronic diseases (a variable influenced by disease severity and lability, among other factors). Such information would be useful in establishing priorities for the development of different chronic disease management protocols (vide infra). It would also assist in pre-trial estimation of the saving of physician visits likely to be achieved by instituting a program utilizing such protocols. (Author)

SOCIAL SECURITY DATA: AID TO MANPOWER PROGRAM EVALUATION.

Interim rept.

William D. Commins. Nov 70, 49p PRC-R-1543
DLMA-81-05-68-06-1

Contract DL-81-05-68-06

Descriptors: (*Manpower, *Education), (*Social security, Statistical data), Evaluation, Benefit cost analysis, Earnings, Economic analysis.

Identifiers: On job training.

The report examines the potential of Social Security Administration data for manpower training evaluation. It assesses the utility of SSA data for comparing the economic gains of on-the-job training and institutional trainees before and after training. The methodology developed incorporates multiple correlation analysis, analysis of variance, and F-ratios and proportions of explained variation as measures of significance. The report notes general information about the nature and limitations of these data. Some of the problems of benefit measurement are discussed and a description of the data sources is provided. Descriptors: (*Hospitals, *Personnel development), Medical personnel, Performance evaluation, Performance standards, Management, Design, Planning, Education.
Identifiers: Health services research and development, *Hospital training programs.

The typical hospital service employee lacks standardized training and he stays for a short time. His replacement, though bearing the same job title, may have very different skills. Hospitals must respond by codifying jobs and providing the in-house training to adequately fill them. This study, done by a general hospital, is based on definition of the total hospital functional structure and identification of its work components. It provides: performance standards, methods for measuring performance, and training programs to meet measured needs. (HSRD abstract)

Descriptors: (*Education, *Technicians), (*Optometry, *Manpower), (*Employment, Technicians), Job descriptions, Programs, Requirements, Personnel development, Questionnaires, Statistical analysis.
Identifiers: *Health occupations.

As a basis for providing meaningful job opportunities for the disadvantaged in health occupations, the study has investigated the current number, duties, and education and training of ancillary optometric personnel and the projected need for such employees. A stratified sample of the Nation's practicing optometrists was surveyed by mailed questionnaires. Questions were designed to determine the present and potential utilization of ancillary optometric personnel and to reveal the relation of specific job tasks to requisite levels of education and training and capacity for independent action. This information, in turn, has permitted the grouping of job tasks into various job descriptions. (Author)

CAREER PATTERNS OF WOMEN PHYSICIANS.
Final rept..
Jane Gaudette Jones. May 71, 199p DLMA-91-23-66-59-1
Grant DL-91-23-66-59
Doctoral thesis.

Descriptors: (*Females, Personnel development), (*Physicians, Females), Manpower utilization, Education, Surveys, Decision making, Family relations, Statistical analysis, Pattern recognition, Questionnaires, Theses.
Identifiers: Career patterns.

The author observes that although women constitute a source of candidates for medicine, the United States has made little attempt to draw talented young women into medicine except in times of crisis. Using the concept of career as developed by Everett Hughes, the exploratory study is focussed on the career line of 265 women (81 medical students, 184 graduate physicians) in order to examine the choices or decisions the woman made as she progressed through the institutionalized sequences of medicine. Also analyzed were non-institutionalized decisions such as marriage and childbearing. The study notes that women tend toward being an elite group, with the decision to study medicine congruent with family professional orientation. Stress and role conflict appear to accompany childbearing regardless of state of career.

Descriptors: (*Pharmacy, *Manpower utilization), Medical personnel, Medical services, Education, Meetings.
Identifiers: *Pharmacists, *Health services research and development.

Pharmacists are professionally under utilized, despite the shortage of health manpower, but that new, essentially clinical roles, are emerging as the nation enters a period of comprehensive health care. These roles, which will depend on new pharmacist-physician relationships, must be identified, studied, and then demonstrated. Pharmacy school curricula, which has been static for some time, will have to reflect the expanded function of the pharmacist. Conference papers and discussions reviewed the following topics: The changing role of the pharmacist; the redefinition of the pharmacist role; the physician/pharmacist team in patient care; the pharmacist's role in drug efficacy control, educational programs for pharmacists; compatibility of physician and pharmacist education; pharmacy and the health care enterprise.

Identifiers: Health services research and development, *Blue Cross Association.

The analysis of a demonstration contract combines the placement of industrial engineers in three urban short-term general hospitals with an incentive based on implemented cost savings projects. The evaluation focuses on quantification of cost savings, obstacles to full implementation, the incentive calculations and their effect, and how involvement in the program affected Blue Cross and participating hospitals. A major conclusion is that a hospital industrial engineering program, to be effective, must be introduced at and have the full support of the organization's highest management

levels. Two results are evident from the evaluation: first, that an industrial engineering program does have an impact on the costs of hospital departments; second, that for an incentive to be effective, it must have considerable dollar power, which can only be achieved through the involvement of all third party agencies which reimburse hospitals on a cost basis.
